Amazon Regains Momentum in Nonfood Shopping

CORESIGHT RESEARCH

Executive Summary

Three Data Points to Watch This Week

1

4.2-percentage-point (PPT) narrowing of the gap between **Walmart** and **Amazon** in nonfood shopping over the past three weeks; this gap eased to **5.7 PPTs** this week. (Figure 7)

2

7.2-PPT month-over-month increase in **Amazon's** nonfood shopper penetration rate—compared with its August 17 trough, when we recorded a purchase rate of 37.4%. This week's was the highest level since July 20. (Figure 7)

3

4.9-PPT week-over-week decline in higher-income consumers' personal financial sentiment. Net-positive financial sentiment among $100,000+ households slid to 6.2% this week. (Figure 2)

What We Think

Where Consumers Are Shopping

Shopping trends indicate improving momentum across retail channels, with **Amazon, Costco** and **Target** gaining traction across food and nonfood categories. While **Walmart** remains the leading destination, the gap between Walmart and Amazon in nonfood shopping is narrowing. We observe that a comparable narrowing in the Walmart-Amazon gap occurred over the same three-week stretch in September 2025, suggesting part of this pattern may be seasonal, rather than a new shift in where consumers choose to shop.

Overall, the recovery has broadened beyond one retailer or format, with warehouse clubs, mass merchants and online platforms all seeing improving engagement since mid-August. This reflects more consumers shopping across a wider range of formats and categories, rather than an acceleration in discretionary spending itself.

Consumer Sentiment

Consumer sentiment remains uneven, with both personal financial and economic sentiment declining slightly this week and remaining in negative territory. Although financial sentiment declined significantly this week, it remained in positive territory, while sentiment among lower- and middle-income consumers continued to show weaker confidence. The gap in financial confidence across income groups suggests that consumer spending power remains differentiated, limiting the likelihood of a broad-based acceleration in discretionary spending.

Our perspective during 2025 and 2026 has been that the consumer economy remains "K-shaped"—with higher-income households continuing to drive retail spending growth while lower-income households absorb a disproportionate share of pressure from higher costs (overall inflation, higher gasoline prices, recently increased interest rates). This view is reinforced by income trends and differences in our latest sentiment data.

Introduction

We analyze findings from our proprietary weekly surveys of consumers in the US, with the most recent undertaken on September 14, 2026.

We cover our regular questions covering consumer behavior, shopping trends and consumer sentiment.

This report presents charted and tabulated survey findings. We analyze weekly data, monthly data and four-week rolling averages. The four-week rolling averages have a lower margin of error due to the larger sample sizes (see the methodology section at the end of this report).

Consumer Sentiment: Rolling Metric Slides

Headline Trends: Personal Finances and the Economy

In this section, we analyze headline trends on consumers' expectations for their personal finances and the economy over the next 12 months, based on four-week rolling averages. Our "net-positive" data represent "better" minus "worse." Readers can find further weekly and monthly data on consumer sentiment in the appendix and additional consumer survey for each sector can be find here *US consumer survey insights databank*.

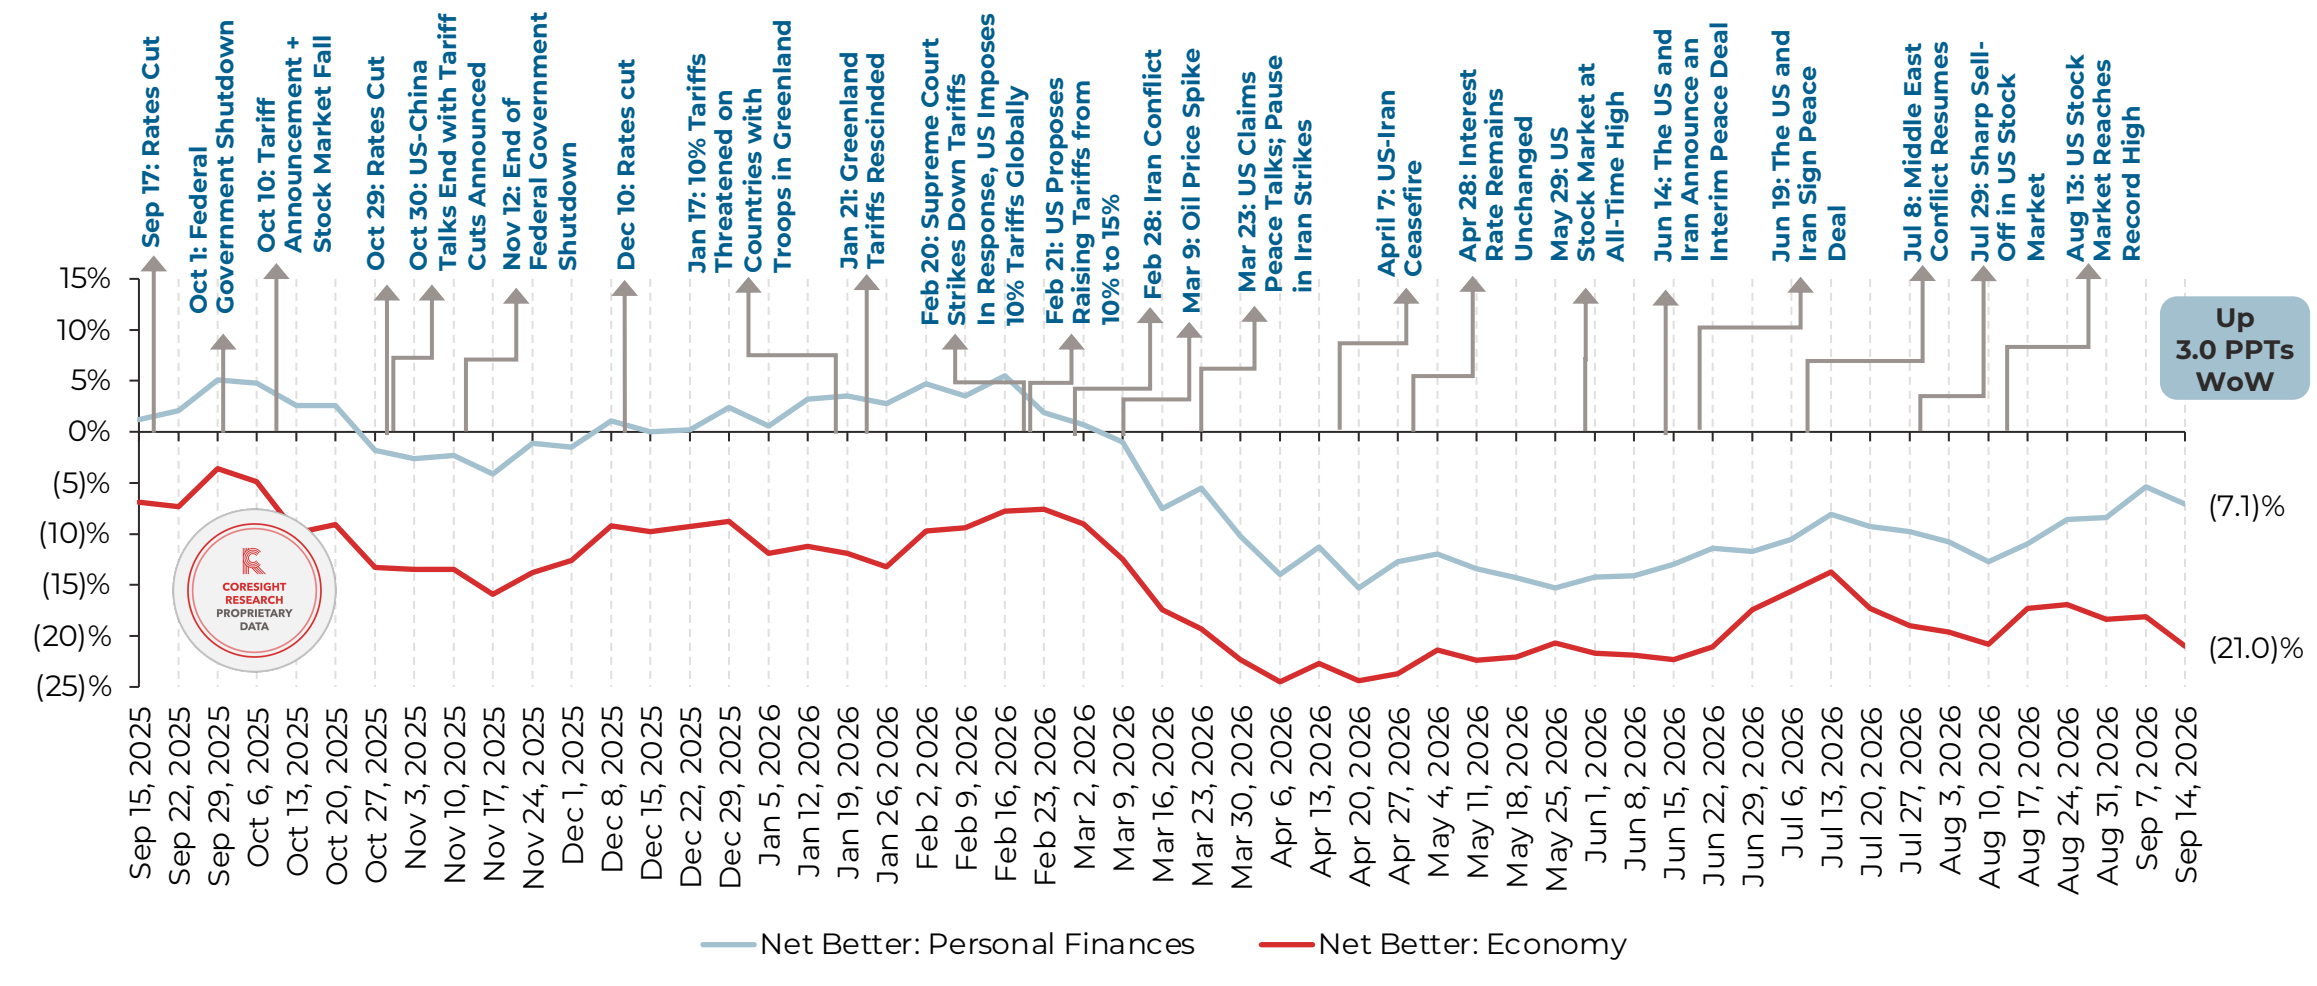

- Both net financial and economic sentiment declined slightly this and remained in negative territory.
- Unadjusted weekly data (Figure 4) show negative one-week movements in net financial and economic sentiment.

Consumer sentiment weakened slightly this week, with both personal financial and economic sentiment declining based on four-week rolling averages. While financial sentiment remains above recent lows, the latest movement indicates that the recent improvement has moderated. Economic sentiment remained broadly subdued, reflecting continued concerns around the broader economic environment.

Personal Finances by Income

Higher-income consumers' financial sentiment declined significantly this week, ending the 4 weeks of upward streak. Among households earning **$100,000+**, net personal-finance sentiment declined significantly, by 4.9 PPTs, but remained in positive territory.

Middle and lower-income sentiment also declined slightly this week. There is still a widen gap between income groups, which continues to point to a more uneven consumer confidence, with higher-income shoppers better positioned to sustain discretionary spending.

The Economy by Income

Based on four-week rolling averages:

- Economic sentiment remains weaker than personal financial sentiment across all income groups, reflecting continued uncertainty around the broader economy.
- Higher-and middle-income consumers' sentiment declined significantly this week.

Weekly Trends: Personal Finances and the Economy

In this section, we analyze trends in consumers' expectations for their personal finances and the economy over the next 12 months, based on weekly data (versus four-week rolling averages in the previous section).

Weekly unadjusted sentiment showed a meaningful pessimism, with both personal finance and economic sentiment declining this week. Personal finance sentiment saw the stronger weakness, declining significantly week over week and turning again to negative territory, while economic sentiment also declined slightly, indicating a broad-based pessimism in near-term consumer confidence.

Where Consumers Are Shopping

Target and Costco Seeing Positive Momentum

The following tables present our further weekly data on shopping and activities undertaken.

Food

Figure 5.
All Respondents: Select Retailers They Have Bought Food Products from in the Past Two Weeks (% of Respondents, Four-Week Rolling Average)

Base: US respondents aged 18+
Source: Coresight Research

Food-shopping penetration continues to broaden across channels. **Walmart** rose slightly to 62.3%, matching its highest four-week rolling level in three months, after recovering from a July 20 low of 56.6%. **Target** and **Costco** remain the standout movers, each posting four consecutive weekly gains and fresh three-month highs—Target up 4.7 PPTs and Costco up 6.0 PPTs from their August 17 troughs. **Amazon** has also strengthened, rising in five straight readings to 23.4%, its highest four-week level since early March 2026.

CORESIGHT RESEARCH Copyright © 2026 Coresight Research. All rights reserved.

The following tables present our further weekly data on shopping and activities undertaken.

Costco, **Target**, **Trader Joe's** and **Whole Foods Market** have each risen for four consecutive weeks from their August 17 lows, while **Amazon** has risen for five straight weeks to 23.4%, its best reading since early March 2026. Shopper penetration is up **6.0 PPTs** at Costco and **4.7 PPTs** at Target versus August 17—both now at three-month highs. **Dollar Tree**, **Sam's Club** and **Family Dollar** all declined again, extending three-month losses of **4.4 PPTs, 1.2 PPTs** and **4.3 PPTs**, respectively. The simultaneous improvement across mass merchandisers, warehouse-club, specialty-grocery and online channels, even as dollar stores keep losing share, suggests broader re-engagement with differentiated formats.

Nonfood

Walmart and Amazon Gradually Closing The Gap

Figure 7.
All Respondents: Select Retailers They Have Bought Nonfood Products from in the Past Two Weeks (% of Respondents, Four-Week Rolling Average)

The **Walmart–Amazon** gap has now narrowed for three consecutive weeks—from **9.9 PPTs** on August 31 to **5.7 PPTs** this week, as Amazon rose a third straight week to 44.6%, its highest level since July 20, 2026. Walmart also gained slightly and reached 50.3%, though still well below its January peak of 55.7%.

Notably, the two retailers advanced together this week rather than moving in the more typical opposite directions, suggesting broader improvement in nonfood engagement.

Base: US respondents aged 18+
Source: Coresight Research

Our data suggest:

- ***Amazon sees more volatile nonfood shopper demand than Walmart***
- ***Amazon and Walmart often move in opposite directions***

Nonfood

Costco has gained in every week since its August 17 trough of 11.6%, reaching a three-month high of 15.9%—up **4.3 PPTs**. **TJX** has followed the same path to 9.6%, just below its three-month high of 9.9%. **Target** dipped marginally on August 24 before rising three straight weeks to a fresh high of 20.8%. Kohl's (8.7%) and Macy's (8.0%, up **3.1 PPTs** from its July 20 low) are also at three-month highs. Overall, the recovery remains concentrated in mass merchandisers, warehouse clubs, off-price and online players.

What Consumers Are Buying

Several categories reached three-month highs this week after troughs between August 17 and August 24. **Food and beverages** rose **6.0 PPTs** from its August 24 low, though the path up has been uneven, not a clean weekly climb. **Apparel**, **beauty** and **pet products** each rose for four consecutive weeks to three-month highs, up **5.8 PPTs, 5.2 PPTs** and **4.7 PPTs** from their August 17 lows; **health** and **household products** also reached three-month highs after choppier paths.

Online purchasing has strengthened even more broadly than in-store. **Food and beverages** extended a five-week streak to a three-month high of 28.7%. **Books, movies, music and video games** jumped from 12.6% on August 3 to 15.4% this week, a structural step-up rather than a one-week blip. **Apparel** is the standout over the longer horizon, up **5.0 PPTs** over three months, the largest such gain of any online category and has risen four straight weeks to 24.8%. **Beauty** climbed **4.5 PPTs** from its August 17 trough to a three-month high of 14.6%, and **health products** staged a sharp three-week recovery from a steep 16.6% trough to 20.4%, largely unwinding its August decline.

Consumer Activities

Out-of-home activity is recovering broadly from a common trough between August 17 and August 24. **Coffee-shop** visits rose to a one-month high of 38.0% (up **5.8 PPTs**), and **shopping mall visits** reached 32.6% (up **6.4 PPTs**) in the same period, a pattern that lines up with the parallel rebound in apparel and general-merchandise buying (Figures 9–10). Restaurant dining and gym attendance also hit one-month highs, up **6.3 PPTs** and **4.4 PPTs** from their August 24 lows.

What We Think

Implications from This Report

Where Consumers Are Shopping

Shopping trends indicate improving momentum across retail channels, with **Amazon, Costco** and **Target** gaining traction across food and nonfood categories. While **Walmart** remains the leading destination, the gap between Walmart and Amazon in nonfood shopping is narrowing. We observe that a comparable narrowing in the Walmart-Amazon gap occurred over the same three-week stretch in September 2025, suggesting part of this pattern may be seasonal, rather than a new shift in where consumers choose to shop.

Overall, the recovery has broadened beyond one retailer or format, with warehouse clubs, mass merchants and online platforms all seeing improving engagement since mid-August. This reflects more consumers shopping across a wider range of formats and categories, rather than an acceleration in discretionary spending itself.

Consumer Sentiment

Consumer sentiment remains uneven, with both personal financial and economic sentiment declining slightly this week and remaining in negative territory. Although financial sentiment declined significantly this week but it remained in positive territory, while sentiment among lower- and middle-income consumers continue to show weaker confidence. The gap in financial confidence across income groups suggests that consumer spending power remains differentiated, limiting the likelihood of a broad-based acceleration in discretionary spending.

Our perspective during 2025 and 2026 has been that the consumer economy remains "K-shaped"—with higher-income households continuing to drive retail spending growth while lower-income households absorb a disproportionate share of pressure from higher costs (overall inflation, higher gasoline prices, recently increased interest rates). This view is reinforced by income trends and differences in our latest sentiment data.

Methodology

Coresight Research surveys US consumers aged 18+ online each week. Informing the data in this report are our surveys spanning the past 12 months:

- 2026—September 14 (401 respondents), September 7 (403 respondents), August 31 (401 respondents), August 24 (404 respondents), August 17 (402 respondents), August 10 (404 respondents), August 3 (401 respondents), July 27 (401 respondents), July 20 (403 respondents), July 13 (403 respondents), July 6 (401 respondents), June 29 (402 respondents), June 22 (402 respondents), June 15 (402 respondents), June 8 (404 respondents), June 1 (402 respondents), May 25 (404 respondents), May 18 (404 respondents), May 11 (401 respondents), May 4 (404 respondents), April 27 (403 respondents), April 20 (401 respondents), April 13 (402 respondents), April 6 (402 respondents), March 30 (403 respondents), March 23 (401 respondents), March 16 (402 respondents), March 9 (400 respondents), March 2 (402 respondents), February 23 (400 respondents), February 16 (402 respondents), February 9 (400 respondents), February 2 (401 respondents), January 26 (402 respondents), January 19 (400 respondents) and January 12 (401 respondents)
- 2025—December 29 (402 respondents), December 22 (401 respondents), December 15 (403 respondents), December 8 (401 respondents), December 1 (404 respondents), November 24 (401 respondents), November 17 (404 respondents), November 10 (401 respondents), November 3 (404 respondents), October 27 (402 respondents), October 20 (401 respondents), October 13 (404 respondents), October 6 (404 respondents), September 29 (405 respondents), September 22 (400 respondents), September 15 (404 respondents), September 8 (400 respondents), September 1 (404 respondents), August 25 (401 respondents), August 18 (402 respondents) and August 11 (401 respondent).

The weekly results have a maximum margin of error of +/- 4.9%, at a 95% confidence level. The four-week rolling average results have a maximum margin of error of +/- 2.4%, at a 95% confidence level. Visit our methodology page for more information, including on how actual margins of error may be lower than these maximums. PPT changes and % figures may not sum due to rounding.
