# Amazon’s Nonfood Lull Deepens Heading into Prime Big Deal Days

CORESIGHT RESEARCH

# Executive Summary

## Three Data Points To Watch This Week

1 **5.0 PPT** **decline in Amazon's nonfood shopper penetration year over year. It declined to 41.2% on October 5, 2026 from 46.2% on October 6, 2025 (pre-Prime Big Deal Days level last year). (Figure 5)**

2 **5.6 PPT** **widening of the gap between Walmart and Amazon in nonfood shopping over the past two weeks; this gap increased to 11.9 PPTs this week. (Figure 7)**

3 **5.9 PPT** **increase in Walmart's food shopper penetration over three months. It increased to 63.9% on October 5, 2026, from 58.0% on July 13, 2026. (Figure 5)**

## What We Think

### *Where Consumers Are Shopping*

Our latest data suggest that **Amazon's** nonfood weakness in the lead-up to Prime Dig Deal Days (October 6–7) may reflect purchase timing. Notably, this pre-event softening is a 2026 pattern: Amazon's nonfood shopper penetration also dipped ahead of June's Prime Day before recovering around the event, while no comparable lull was evident ahead of Prime Big Deal Days last year.

Amazon's penetration is now 5.0 PPTs below its level immediately before last year's Prime Big Deal Days, adding support to the possibility that some shoppers are again delaying purchases until deals go live. The October 12 survey will show whether the pattern repeats following this year's event.

On the other hand, **Walmart's** continued gains despite its own looming promotional activity ("Walmart Deals") suggest that its everyday-value proposition may be giving shoppers less reason to defer purchases.

Meanwhile, Amazon's relatively stable food penetration reinforces the view that the softness is specific to nonfood rather than a broader loss of shopper engagement.

### *Consumer Sentiment*

The deterioration in household financial expectations reinforces a more cautious and increasingly polarized consumer environment. Worsening financial sentiment among lower-income consumers points to continued pressure on discretionary spending.

The deterioration at the lower end of the income spectrum reinforces the K-shaped consumer dynamic, with higher-income households better positioned to sustain spending while lower-income households face greater pressure from rising costs.

# Introduction

We analyze findings from our proprietary weekly surveys of consumers in the US, with the most recent undertaken on October 5, 2026.

We cover our regular questions covering consumer behavior, shopping trends and consumer sentiment.

This report presents charted and tabulated survey findings. We analyze weekly data, monthly data and four-week rolling averages. The four-week rolling averages have a lower margin of error due to the larger sample sizes (see the methodology section at the end of this report).

# Consumer Sentiment: Financial Expectations Lose Ground

## Headline Trends: Personal Finances and the Economy

In this section, we analyze headline trends on consumers' expectations for their personal finances and the economy over the next 12 months, based on four-week rolling averages. Our "net-positive" data represent "better" minus "worse." Readers can find further weekly and monthly data on consumer sentiment in the appendix, and additional consumer survey data for each sector in our *US Consumer Survey Insights Databank*.

This week:

- Consumers' expectations for their own finances weakened, while their expectations for the economy declined slightly. Both remain in negative territory. Personal-finance expectations have now joined the economy below their mid-July level.
- Household financial expectations gave back almost all of their late-summer improvement, falling to their weakest reading since mid-August. The one-week move is statistically significant and removes the main support for last week's read that financial sentiment was stabilizing.

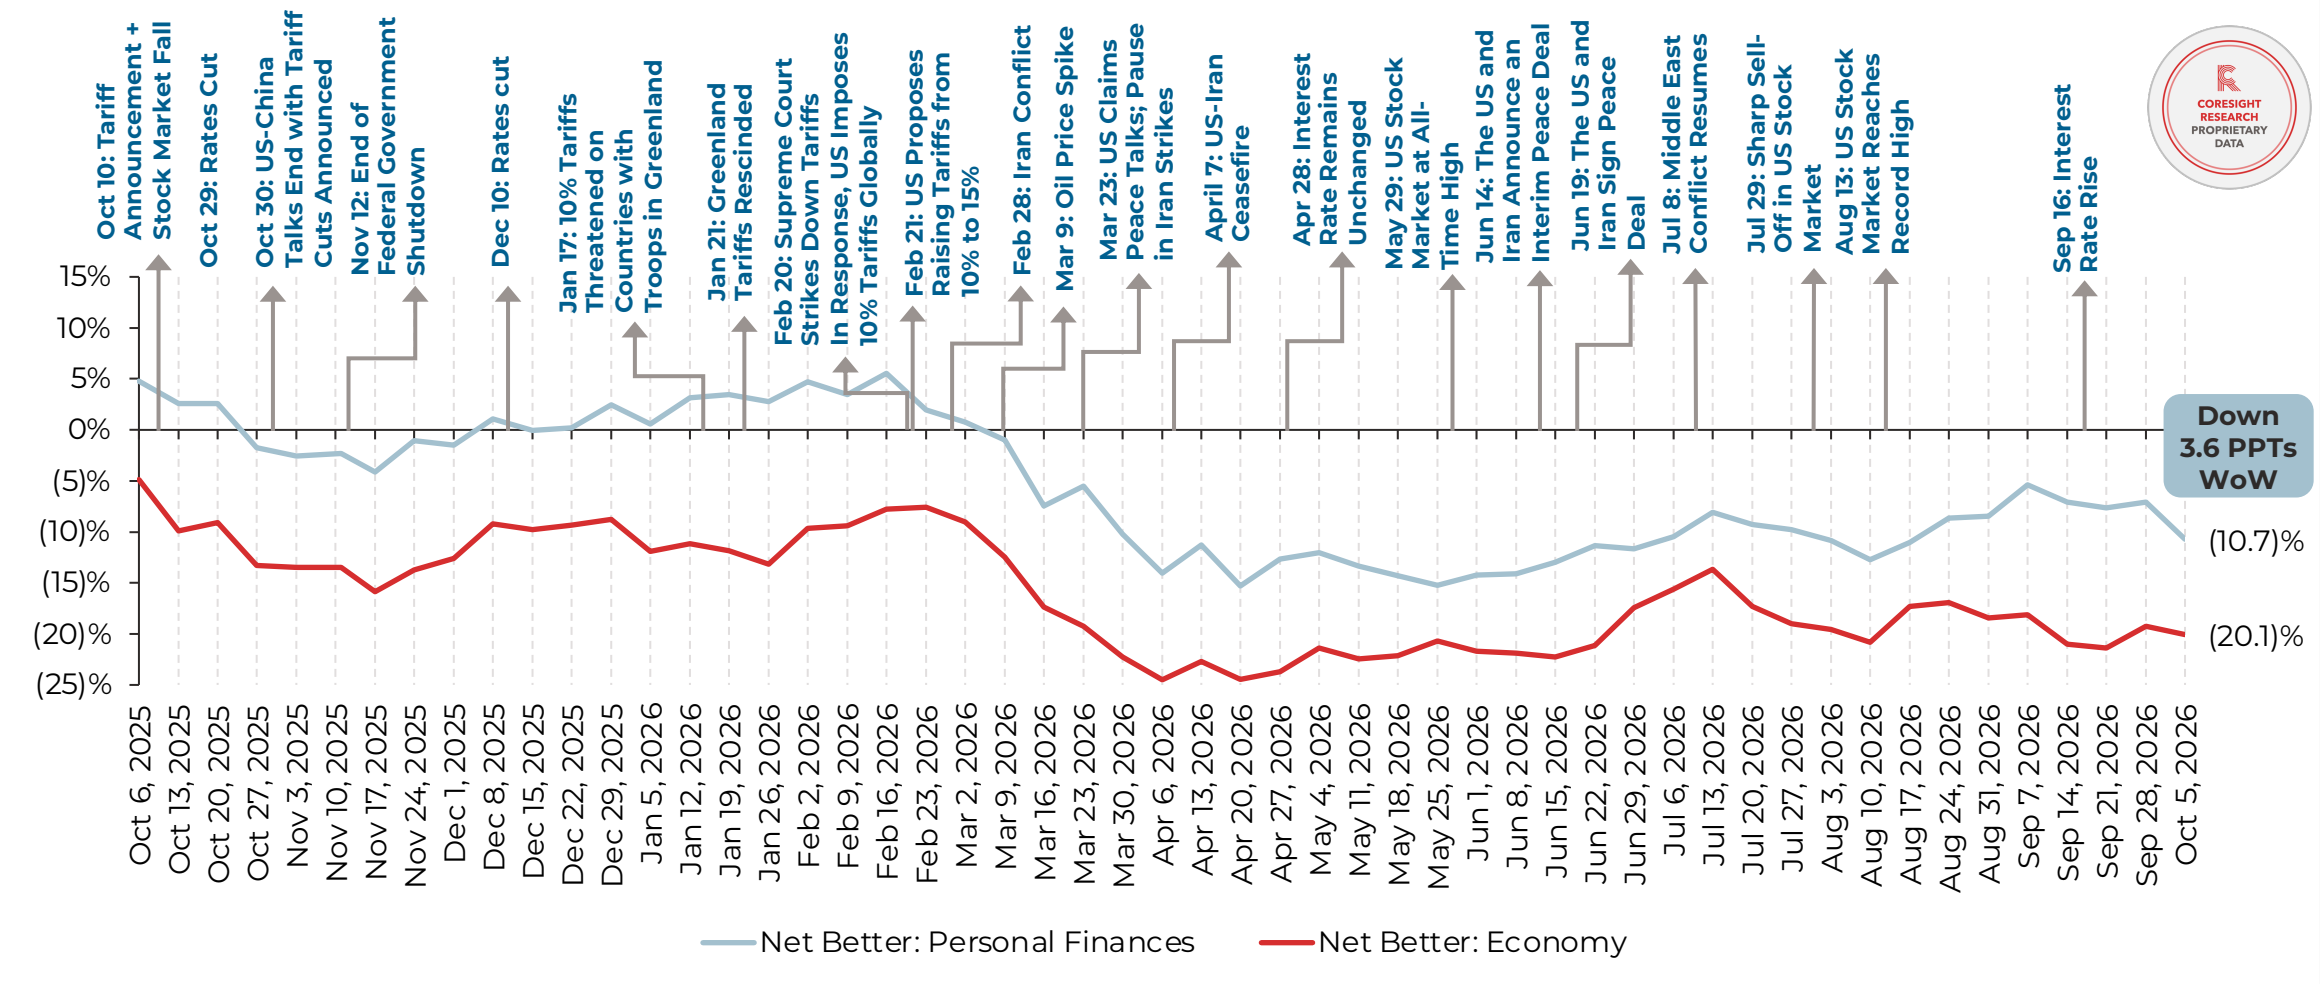

**Inflection points and gasoline prices:** Figure 1 calls out significant events that could impact consumer sentiment. In addition, our analysis shows consumer sentiment generally moving in the opposite direction to gasoline prices: Typically, as gas prices rise, sentiment falls.

Unadjusted weekly data (Figure 4) show negative one-week movements in net financial and economic sentiment.

## *Personal Finances by Income*

Lower-income households have the weakest financial outlook of the three income groups, and it is their weakest since May 11, 2026. It has declined significantly, by 6.8 PPTs, since September 21, 2026.

Higher-income households remain the only group in positive territory; however, sentiment declined significantly this week. Middle-income households' expectations remain flat this week.

**Figure 2.**
**All Respondents: Whether They Expect Their Household Financial Situation to Get Better or Worse Over the Next 12 Months—Net Better, by Income (% of Respondents, Four-Week Rolling Average)**

*Data represent total "better" minus total "worse"*
*Base: US respondents aged 18+*

## *The Economy by Income*

Economic expectations show the same split at the bottom. Lower-income households' outlook is the weakest since mid-June, while higher-income households are the only group whose economic outlook has improved over the time and is at its highest level since March 23, 2026. It is also 8.2 PPT higher than its recent trough on September 14, 2026.

The middle-income group shows the steepest three-month decline of any income band in either sentiment figure, so the deterioration is not confined to the lowest-income households.

## Weekly Trends: Personal Finances and the Economy

In this section, we analyze trends in consumers' expectations for their personal finances and the economy over the next 12 months, based on unadjusted weekly data (versus four-week rolling averages in the previous section).

Both weekly measures fell this week, the economy more sharply, although not statistically significant. The weekly economic reading gave back more than last week's improvement, so the narrowing between the two measures noted in our last week did not carry through.

# Where Consumers Are Shopping

***Walmart and Amazon Hold Their Food Gains***

The following tables present our further weekly data on shopping and activities undertaken.

## Food

**Figure 5.**
**All Respondents: Select Retailers They Have Bought Food Products from in the Past Two Weeks (% of Respondents, Four-Week Rolling Average)**

*Base: US respondents aged 18+*
*Source: Coresight Research*

**Walmart** and **Amazon** eased only fractionally from the 13-week highs they reached last week and retain the two largest three-month gains in the food table.

Unlike in nonfood, **Amazon**'s food shopper penetration shows no lull ahead of its October Prime Big Deal Days event.

**Dollar Tree** rose for a third straight week, to the highest readings in three months.

CORESIGHT RESEARCH Copyright © 2026 Coresight Research. All rights reserved.

The following tables present our further weekly data on shopping and activities undertaken.

**Walmart** and **Amazon** have recorded the strongest three-month gains in shopper penetration among major retailers, rising **5.9 PPTs** and **5.3 PPTs**, respectively, since July 13, 2026.

**Sam's Club** has gained momentum in recent weeks, rising from 15.4% on September 21 to 16.7% on October 5, its highest level in the period shown. **Costco** has moved in the opposite direction, falling from 22.4% on September 21 to 19.5% on October 5, leaving its three-month penetration broadly flat.

# Nonfood

## *Amazon Slips Again as Walmart Extends Its Run*

**Figure 7.**
**All Respondents: Select Retailers They Have Bought Nonfood Products from in the Past Two Weeks (% of Respondents, Four-Week Rolling Average)**

*Base: US respondents aged 18+*
*Source: Coresight Research*

**Amazon** fell for a second consecutive week and is now below its mid-July level, while **Walmart** rose for a fourth consecutive week.

Walmart's lead over Amazon in nonfood shopper penetration has widened significantly, with the gap reaching **11.9 PPT** this week.

Amazon's penetration is 5.0 PPTs below its level immediately before last year's Prime Big Deal Days. We saw a similar pre-event dip ahead of June's Prime Day, followed by a rebound in Amazon's nonfood shopper penetration.

The fact that this pattern has emerged ahead of both major Amazon deal events in 2026, but was not evident before last year's Prime Big Deal Days, lends some support to the possibility that shoppers are delaying purchases until deals go live. Our October 12 survey will show whether Amazon regains ground following the event.

## Nonfood

**Walmart**, **Dollar Tree** and **Dollar General** are all at their highest readings in three months. **Amazon**, **Target**, **Costco** and **Family Dollar** each fell slightly this week, though none of these moves is statistically significant.

Amazon's shopper penetration has declined for two consecutive weeks, reaching its lowest level in the past one month ahead of Prime Big Deal Days.

# Consumer Activities

Consumer activities remain mixed, with retail and leisure engagement holding relatively steady despite some weekly volatility. Mall visits have increased slightly over the past three months, suggesting some recent strengthening in physical shopping activity as we head into the holiday quarter, while social activities have softened recently. Overall, consumers remain selective in discretionary activities amid a cautious spending environment.

# What We Think

***Where Consumers Are Shopping***

Our latest data suggest that **Amazon's** nonfood weakness in the lead-up to Prime Dig Deal Days (October 6–7) may reflect purchase timing. Notably, this pre-event softening is a 2026 pattern: Amazon's nonfood shopper penetration also dipped ahead of June's Prime Day before recovering around the event, while no comparable lull was evident ahead of Prime Big Deal Days last year.

Amazon's penetration is now 5.0 PPTs below its level immediately before last year's Prime Big Deal Days, adding support to the possibility that some shoppers are again delaying purchases until deals go live. The October 12 survey will show whether the pattern repeats following this year's event.

On the other hand, **Walmart's** continued gains despite its own looming promotional activity ("Walmart Deals") suggest that its everyday-value proposition may be giving shoppers less reason to defer purchases.

Meanwhile, Amazon's relatively stable food penetration reinforces the view that the softness is specific to nonfood rather than a broader loss of shopper engagement.

***Consumer Sentiment***

The deterioration in household financial expectations reinforces a more cautious and increasingly polarized consumer environment. Worsening financial sentiment among lower-income consumers points to continued pressure on discretionary spending.

The deterioration at the lower end of the income spectrum reinforces the K-shaped consumer dynamic, with higher-income households better positioned to sustain spending while lower-income households face greater pressure from rising costs.

# Methodology

Coresight Research surveys US consumers aged 18+ online each week. Informing the data in this report are our surveys spanning the past 12 months:

- 2026—October 5 (401 respondents), September 28 (403 respondents), September 21 (404 respondents), September 14 (401 respondents), September 7 (403 respondents), August 31 (401 respondents), August 24 (404 respondents), August 17 (402 respondents), August 10 (404 respondents), August 3 (401 respondents), July 27 (401 respondents), July 20 (403 respondents), July 13 (403 respondents), July 6 (401 respondents), June 29 (402 respondents), June 22 (402 respondents), June 15 (402 respondents), June 8 (404 respondents), June 1 (402 respondents), May 25 (404 respondents), May 18 (404 respondents), May 11 (401 respondents), May 4 (404 respondents), April 27 (403 respondents), April 20 (401 respondents), April 13 (402 respondents), April 6 (402 respondents), March 30 (403 respondents), March 23 (401 respondents), March 16 (402 respondents), March 9 (400 respondents), March 2 (402 respondents), February 23 (400 respondents), February 16 (402 respondents), February 9 (400 respondents), February 2 (401 respondents), January 26 (402 respondents), January 19 (400 respondents) and January 12 (401 respondents)
- 2025—December 29 (402 respondents), December 22 (401 respondents), December 15 (403 respondents), December 8 (401 respondents), December 1 (404 respondents), November 24 (401 respondents), November 17 (404 respondents), November 10 (401 respondents), November 3 (404 respondents), October 27 (402 respondents), October 20 (401 respondents), October 13 (404 respondents), October 6 (404 respondents), September 29 (405 respondents), September 22 (400 respondents), September 15 (404 respondents), September 8 (400 respondents) and September 1 (404 respondents).
- The weekly results have a maximum margin of error of ±4.9%, at a 95% confidence level. The four-week rolling average results have a maximum margin of error of ±2.4%, at a 95% confidence level. Visit our methodology page for more information, including on how actual margins of error may be lower than these maximums. PPT changes and % figures may not sum due to rounding.
