Consumers Reward Scale as Amazon Gains

CORESIGHT RESEARCH

Executive Summary

Three Data Points To Watch This Week

1. **4.1-percentage-point (PPT)** increase in **Amazon's** food shopper penetration over three months. It increased to 23.7% on September 21, 2026, and is at its highest level in three months. (Figure 5)

2. **5.4-PPT** increase in **Amazon's** nonfood shopper penetration over three months. It to 44.8% on September 21, 2026, recovering steadily after a late-August low. (Figure 6)

3. **4.1-PPT** decline in **Dollar Tree's** food shopper penetration over three months. It declined from 24.3% on June 29, 2026, to 20.1% on September 21, 2026. (Figure 5)

What We Think

Where Consumers Are Shopping

In the short term, value-seeking is concentrating around scaled destinations. Amazon's gains in both food and nonfood shopper penetration, alongside improving engagement at mass merchants, suggest that consumers are currently favoring retailers that offer a combination of value, assortment and convenience. At the same time, recent dollar-store declines appear to reflect near-term shifts in shopper engagement rather than a broader pullback from value retail, as consumers continue to prioritize affordability across formats.

These movements should be viewed as short-term shifts in shopper engagement rather than evidence of a permanent change in consumer preferences. However, the consistency of gains among scaled retailers across multiple categories makes this a trend worth monitoring as we enter the holiday quarter.

Consumer Sentiment

Consumer sentiment remains divided, with household financial expectations holding up better than broader economic sentiment. While higher-income households remain the only group with positive net financial sentiment, their confidence has moderated from recent highs. This remains an important area to monitor given that higher-income consumers have been a key driver of discretionary spending.

The recent Federal Reserve rate rise adds another pressure point for some consumers. While higher-income households are generally better positioned to absorb higher borrowing costs, lower- and middle-income consumers may face greater pressure from higher credit and financing costs. The rate increase could therefore reinforce the existing divergence between financially resilient consumers and those more exposed to cost pressures.

Introduction

We analyze findings from our proprietary weekly surveys of consumers in the US, with the most recent undertaken on September 21, 2026.

We cover our regular questions covering consumer behavior, shopping trends and consumer sentiment.

This report presents charted and tabulated survey findings. We analyze weekly data, monthly data and four-week rolling averages. The four-week rolling averages have a lower margin of error due to the larger sample sizes (see the methodology section at the end of this report).

Consumer Sentiment: Rolling Metric Slips as Fed Raises Rates

Headline Trends: Personal Finances and the Economy

In this section, we analyze headline trends on consumers' expectations for their personal finances and the economy over the next 12 months, based on four-week rolling averages. Our "net-positive" data represent "better" minus "worse." Readers can find further weekly and monthly data on consumer sentiment in the appendix and additional consumer survey for each sector can be find here *US consumer survey insights databank*.

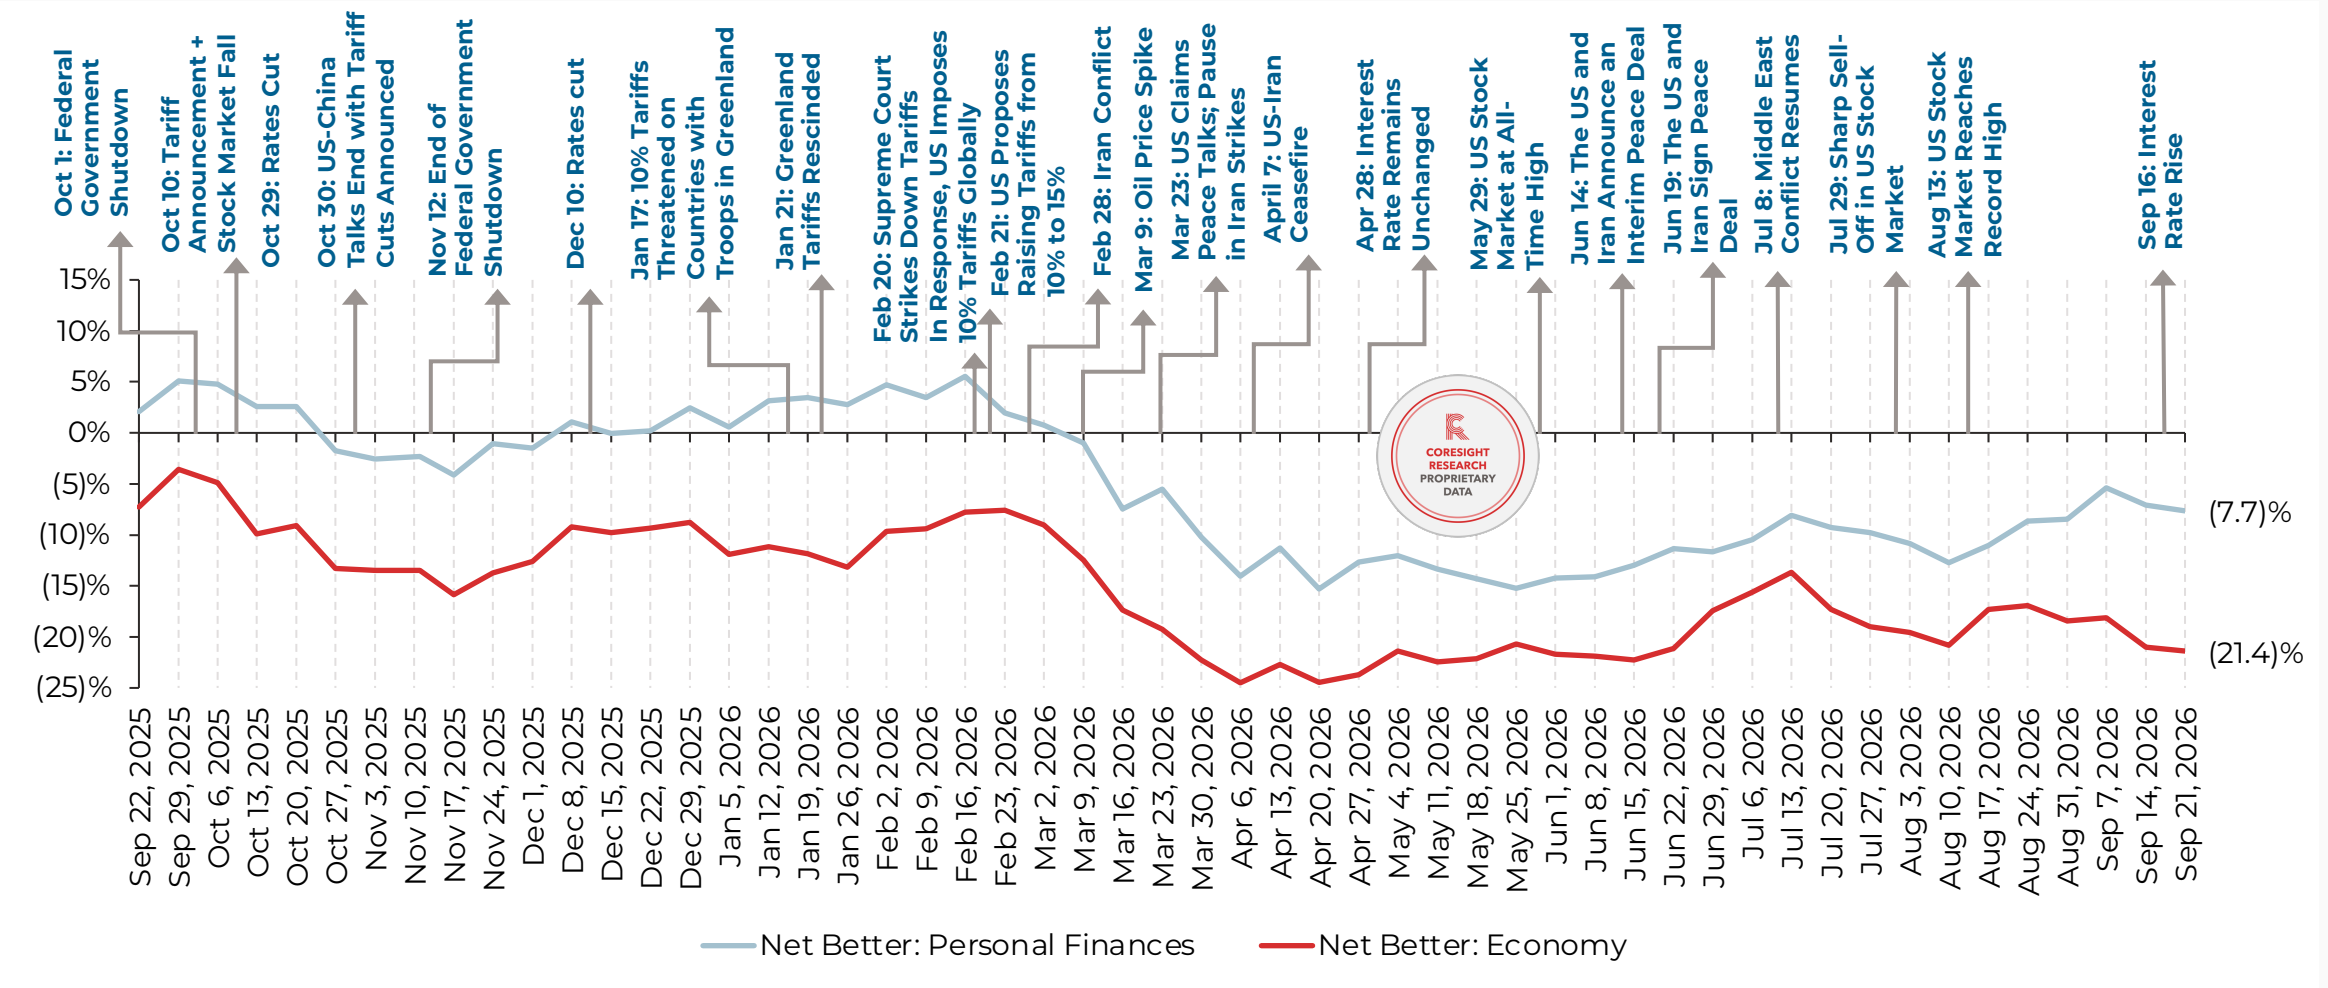

- Consumers' expectations for their own finances and their expectations for the economy both edged lower this week, and both remain in negative territory.
- However, unadjusted weekly data (Figure 4) show positive one-week movements in net financial and economic sentiment.

Overall, consumer sentiment remains pressured, with both household financial and broader economic expectations in negative territory. However, household financial expectations have held up better and have improved over the past three months, while views of the economy have worsened. This divergence suggests that consumers feel relatively more stable about their own finances than about the broader economic environment.

Personal Finances by Income

Higher-income households (earning $100,000 or more) remain the only income group with positive net financial sentiment, although confidence has moderated from its recent peak. Lower-income households continue to report negative expectations, reflecting greater sensitivity to cost pressures.

Higher-income households are the group our K-shaped framing identifies as carrying discretionary spending growth, and their confidence advantage narrowed for a second consecutive week—though one fortnight does not unwind a summer.

The Economy by Income

Based on four-week rolling averages:

- Economic expectations remain negative across all income groups, but the recent movement has differed by segment. Lower-income households recorded the weakest reading, while higher- and middle-income consumers showed modest improvement. Despite some short-term movement, confidence remains broadly constrained by concerns about the economic outlook.

Weekly Trends: Personal Finances and the Economy

In this section, we analyze trends in consumers' expectations for their personal finances and the economy over the next 12 months, based on weekly data (versus four-week rolling averages in the previous section).

Both weekly measures moved in the opposite direction from their four-week rolling equivalents this week. Unadjusted sentiment improved slightly, with both personal finance and economic sentiment recording week-over-week gains.

Where Consumers Are Shopping

Dollar Stores Cede Ground as Value Seeking Concentrates

The following tables present our further weekly data on shopping and activities undertaken.

Food

Figure 5.
All Respondents: Select Retailers They Have Bought Food Products from in the Past Two Weeks (% of Respondents, Four-Week Rolling Average)

Base: US respondents aged 18+
Source: Coresight Research

Walmart remains the dominant food destination, but eased from last week's three-month high. **Amazon** posted the largest three-month gain of any retailer covered, at **4.1 PPTs**.

The clearer pattern sits at the discount end. **Family Dollar**, **Dollar Tree** and **Dollar General** are the three steepest three-month decliners in food, at 5.1 PPTs, 4.2 PPTs and 4.1 PPTs, respectively. The separation is large enough to treat the dollar channel as moving as a block as three retailers happening to drift together.

CORESIGHT RESEARCH Copyright © 2026 Coresight Research. All rights reserved.

The food data reinforce a broader shift toward scale and trip consolidation. **Walmart** continues to lead by a wide margin, while **Amazon** has recorded the strongest recent momentum among tracked retailers. The simultaneous **weakness** across all **three dollar-store banners** suggests that value-seeking consumers may be prioritizing breadth, convenience and one-stop shopping rather than solely pursuing the lowest price point.

Nonfood

Walmart and Amazon Both Advance Again

Figure 7.
All Respondents: Select Retailers They Have Bought Nonfood Products from in the Past Two Weeks (% of Respondents, Four-Week Rolling Average)

Base: US respondents aged 18+
Source: Coresight Research

Walmart rose slightly, a second consecutive weekly gain, and **Amazon** also improved slightly, a fourth weekly gain. Both advanced together for a second straight week.

Because **Walmart** gained more, the gap between the two widened this week, interrupting the three-week narrowing.

The recent improvement among mass merchants and online channels contrasts with softer performance among dollar-store banners.

Our data suggest:

- ***Amazon**'s three-month gain is the largest of any nonfood retailer here, and the only one of that magnitude*
- ***Walmart** remains below its late-June level despite the recent recovery*

Copyright © 2026 Coresight Research. All rights reserved.

Nonfood

The nonfood data show a similar pattern to food: dollar-store banners have experienced broad-based declines, while mass merchants, warehouse clubs, off-price retailers and online players have improved. Although it is too early to define this as a structural shift, the consistency across categories suggests consumers may increasingly favor retailers that combine value with assortment and convenience.

Amazon has recorded the strongest three-month gain (up **5.4 PPTs**) among tracked retailers, recovering from its late-August low.

What Consumers Are Buying

In-store shopping activity remains concentrated around essential categories, with food, household products and personal care leading. Recent gains have been more selective, with **health products**, **beauty** and **jewelry** showing upward momentum. Early holiday-related categories, including **toys**, are also beginning to show improvement.

Consumer Activities

Consumer activities remain mixed, with retail and leisure engagement holding relatively steady despite some weekly volatility. Mall visits have improved over the past three months, indicating continued relevance for physical retail environments, while social and dining activities have softened recently. Overall, consumers remain selective in discretionary activities amid a cautious spending environment.

What We Think

Implications from This Report

Where Consumers Are Shopping

In the short term, value-seeking is currently concentrating around scaled destinations. **Amazon's** gains in both food and nonfood shopper penetration, alongside improving engagement at mass merchants, suggest that consumers are currently favoring retailers that offer a combination of value, assortment and convenience. At the same time, recent dollar-store declines appear to reflect near-term shifts in shopper engagement rather than a broader pullback from value retail, as consumers continue to prioritize affordability across formats.

These movements should be viewed as short-term shifts in shopper engagement rather than evidence of a permanent change in consumer preferences. However, the consistency of gains among scaled retailers across multiple categories makes this a trend worth monitoring as we enter the holiday quarter.

Consumer Sentiment

Consumer sentiment remains divided, with household financial expectations holding up better than broader economic sentiment. While higher-income households remain the only group with positive net financial sentiment, their confidence has moderated from recent highs. This remains an important area to monitor given that higher-income consumers have been a key driver of discretionary spending.

The recent Federal Reserve rate rise adds another pressure point for some consumers. While higher-income households are generally better positioned to absorb higher borrowing costs, lower- and middle-income consumers may face greater pressure from higher credit and financing costs. The rate increase could therefore reinforce the existing divergence between financially resilient consumers and those more exposed to cost pressures.

Methodology

Coresight Research surveys US consumers aged 18+ online each week. Informing the data in this report are our surveys spanning the past 12 months:

- 2026—September 21 (404 respondents), September 14 (401 respondents), September 7 (403 respondents), August 31 (401 respondents), August 24 (404 respondents), August 17 (402 respondents), August 10 (404 respondents), August 3 (401 respondents), July 27 (401 respondents), July 20 (403 respondents), July 13 (403 respondents), July 6 (401 respondents), June 29 (402 respondents), June 22 (402 respondents), June 15 (402 respondents), June 8 (404 respondents), June 1 (402 respondents), May 25 (404 respondents), May 18 (404 respondents), May 11 (401 respondents), May 4 (404 respondents), April 27 (403 respondents), April 20 (401 respondents), April 13 (402 respondents), April 6 (402 respondents), March 30 (403 respondents), March 23 (401 respondents), March 16 (402 respondents), March 9 (400 respondents), March 2 (402 respondents), February 23 (400 respondents), February 16 (402 respondents), February 9 (400 respondents), February 2 (401 respondents), January 26 (402 respondents), January 19 (400 respondents) and January 12 (401 respondents)
- 2025—December 29 (402 respondents), December 22 (401 respondents), December 15 (403 respondents), December 8 (401 respondents), December 1 (404 respondents), November 24 (401 respondents), November 17 (404 respondents), November 10 (401 respondents), November 3 (404 respondents), October 27 (402 respondents), October 20 (401 respondents), October 13 (404 respondents), October 6 (404 respondents), September 29 (405 respondents), September 22 (400 respondents), September 15 (404 respondents), September 8 (400 respondents), September 1 (404 respondents), August 25 (401 respondents) and August 18 (402 respondents).
- The weekly results have a maximum margin of error of ±4.9%, at a 95% confidence level. The four-week rolling average results have a maximum margin of error of ±2.4%, at a 95% confidence level. Visit our methodology page for more information, including on how actual margins of error may be lower than these maximums. PPT changes and % figures may not sum due to rounding.
