US Consumer Survey Insights

# October Sales Event Week: Did Shoppers Respond?

CORESIGHT RESEARCH

# Executive Summary

## Three Data Points To Watch This Week

1 **(3.7) PPT**

**Walmart's nonfood shopper penetration fell week over week. It fell from 53.9% to 50.2% week over week during its October deal event, its lowest weekly reading since early September. (Weekly data)**

2 **Almost Flat**

**Amazon's weekly nonfood shopper penetration. It reached 41.8% this week, versus 41.2% last week. (Weekly data)**

3 **18.8 %**

**Target's weekly nonfood shopper penetration, which rose to its highest reading since mid-September in the week of its Target Circle Deal Days. (Weekly data)**

## What We Think

### *Where Consumers Are Shopping*

The October 5–11 deal events appear to have had a muted impact on shopper penetration overall. On a four-week rolling average, **Walmart**, **Amazon**, **Target** and **Kohl's** were broadly flat week over week; on a weekly basis, Walmart and Kohl's declined slightly, while Amazon and Target edged higher. Electronics was a clearer bright spot, with in-store penetration up significantly over three months and online penetration also edging up this week, suggesting the category may have benefited from October deal activity.

### *Consumer Sentiment*

Consumer sentiment remains broadly negative, with the clearest divide across income groups. Higher-income consumers have become more optimistic about the economy since September 21, while lower-income consumers have become more pessimistic over the same period, reinforcing the K-shaped consumer environment. This divergence suggests that higher-income households are better positioned to sustain spending, while lower-income consumers remain more vulnerable to economic pressures.

# Introduction

We analyze findings from our proprietary weekly surveys of consumers in the US, with the most recent undertaken on October 12, 2026.

We cover our regular questions covering consumer behavior, shopping trends and consumer sentiment.

This report presents charted and tabulated survey findings. We analyze weekly data, monthly data and four-week rolling averages. The four-week rolling averages have a lower margin of error due to the larger sample sizes (see the methodology section at the end of this report).

# Consumer Sentiment: Financial Expectations Hold at a Lower Level

## Headline Trends: Personal Finances and the Economy

In this section, we analyze headline trends on consumers' expectations for their personal finances and the economy over the next 12 months, based on four-week rolling averages. Our "net-positive" data represent "better" minus "worse." Readers can find further weekly and monthly data on consumer sentiment in the appendix, and additional consumer survey data for each sector in our *US Consumer Survey Insights Databank*.

**This week:**

- Consumers' expectations for their own finances and for the economy remained almost flat. Both remain in negative territory.
- Overall, consumer sentiment remained weak as elevated gasoline prices and broader economic concerns continue to weigh on household outlooks.
- Unadjusted weekly data (Figure 4) show positive one-week movements in net financial and economic sentiment.

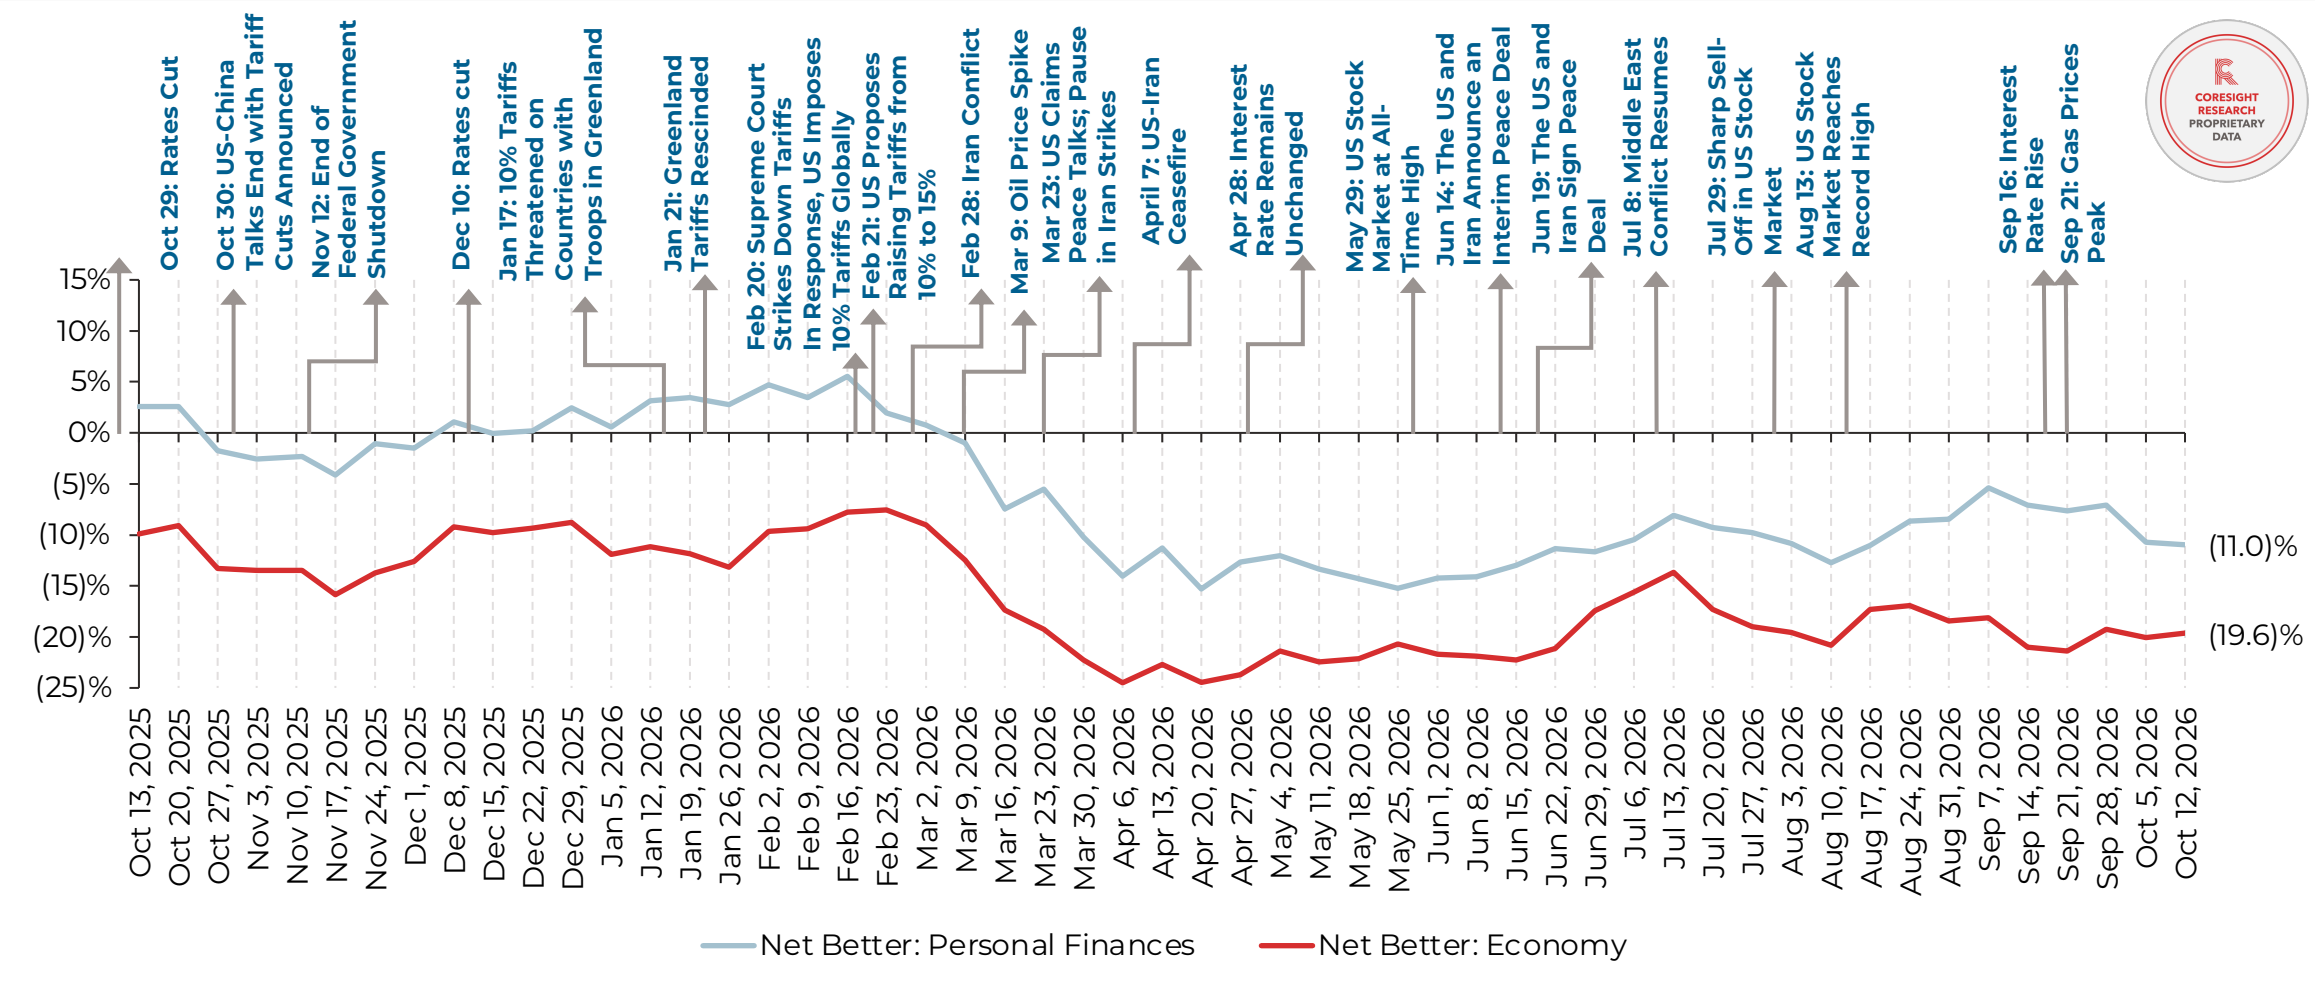

We expect consumers to remain selective, with value, promotions and essential purchases likely to take priority over discretionary spending.

**Inflection points and gasoline prices:** Figure 1 calls out significant events that could impact consumer sentiment. In addition, our analysis shows consumer sentiment generally moving in the opposite direction to gasoline prices: Typically, as gas prices rise, sentiment falls.

## *Personal Finances by Income*

Higher-income households remain the only group with a positive net outlook for their personal finances, while middle-and lower-income groups' expectations remain firmly in negative territory.

Although lower-income households' financial outlook edged up from last week's weakest reading since May but remains the weakest of the three income groups, reinforcing the likelihood that discretionary spending will remain more resilient among higher-income consumers than among value-constrained households.

**Figure 2.**
**All Respondents: Whether They Expect Their Household Financial Situation to Get Better or Worse Over the Next 12 Months—Net Better, by Income (% of Respondents, Four-Week Rolling Average)**

*Data represent total "better" minus total "worse"*

## *The Economy by Income*

The divide is even more pronounced in consumers' expectations for the economy. Since September 14, higher-income households' economic expectations has improved significantly (up by **10.9 PPTs**), while lower-income households' expectations has weakened in the same period and is now at the lowest level since mid-June.

This widening gap suggests that macroeconomic concerns are being felt disproportionately at the lower end of the income spectrum.

## Weekly Trends: Personal Finances and the Economy

In this section, we analyze trends in consumers' expectations for their personal finances and the economy over the next 12 months, based on unadjusted weekly data (versus four-week rolling averages in the previous section).

The personal-finance reading improved from its recent lows but remains well below its stronger readings earlier in the year, while economic sentiment continues to fluctuate at a deeply negative level.

# Where Consumers Are Shopping

***Walmart and Amazon among With Dollar General Remain Materially Higher Than Three Months Ago***

The following tables present our further weekly data on shopping and activities undertaken.

## Food

**Figure 5.**
**All Respondents: Select Retailers They Have Bought Food Products from in the Past Two Weeks (% of Respondents, Four-Week Rolling Average)**

*Base: US respondents aged 18+*
*Source: Coresight Research*

**Walmart** continues to dominate food shopping, but its recent momentum has softened slightly, although it remains **5.9 PPTs** above its July level, the largest three-month gain among the major food retailers shown.

Meanwhile, **Kroger** and **Trader Joe's** have fallen to their lowest readings in the 12-month series, while **Amazon** and **Dollar General** remain materially higher than three months ago. The divergence suggests that value-oriented mass retail continues to capture food-shopping demand, but gains are not evenly distributed across the grocery landscape.

CORESIGHT RESEARCH Copyright © 2026 Coresight Research. All rights reserved.

The following tables present our further weekly data on shopping and activities undertaken.

The broader food picture remains mixed rather than uniformly value-driven. **Walmart** retains a significant lead despite giving back some of its recent gains, while **Dollar General** and **Amazon** have both strengthened meaningfully over three months. By contrast, **Kroger**, **Costco**, **Publix** and **Trader Joe's** are below their July levels, pointing to some redistribution of shopper activity among grocery and value formats. **Sam's Club** is the notable recent positive, reaching its highest reading in the 13-week table.

# Nonfood

## *Target Slightly Gains Shoppers in Deal Week as Walmart Slips*

**Figure 7.**
**All Respondents: Select Retailers They Have Bought Nonfood Products from in the Past Two Weeks (% of Respondents, Four-Week Rolling Average)**

*Base: US respondents aged 18+*
*Source: Coresight Research*

The October 5–11 sales events produced mixed shopper responses across the four participating retailers. On a week-over-week basis, **Walmart** and **Kohl's** saw declines in shopper penetration, while **Target** posted a slight increase;

**Amazon** was almost flat. Amazon's weekly penetration has nevertheless risen from 39.1% on September 21 to 41.8% on October 12, even as its four-week rolling average has continued to decline since September 21.

On the four-week rolling average, all four retailers were broadly flat week over week. Overall, the event week did not produce a clear increase in shopper penetration across the four retailers, with only Target showing a modest weekly gain.

**Our data show:**

- **Dollar Tree** and **Dollar General** are at the highest readings in our 13-week table

Copyright © 2026 Coresight Research. All rights reserved.

## Nonfood

The three-month picture highlights a widening divergence between **Walmart** and **Amazon**. Walmart's shopper penetration is up 3.9 PPTs from July, while Amazon is down 4.7 PPT. **Dollar Tree** and **Dollar General** have also gained over the three months. **Costco** has now given back its late-summer gains through four consecutive weekly declines, bringing its shopper penetration back to its mid-July level.

# What Consumers Are Buying

In-store spending patterns show early signs of holiday-related and October events category rotation. Electronics and toys/games have reached their highest readings in the 13-week series, consistent with consumers beginning to purchase holiday-related items earlier, with electronics shopper penetration increasing significantly by 4.1 PPT over three months.. At the same time, food and beverages fell over three months, while home-improvement and garden products declined significantly, by 4.8 PPTs, likely due to recent increase in interest rate.

**Figure 9.**
**All Respondents: Product Categories They Have Bought In-Store in the Past Two Weeks (% of Respondents, Four-Week Rolling Average)**

| | In-Store | | | | | | | | | | | | | | |

CORESIGHT RESEARCH Copyright © 2026 Coresight Research. All rights reserved.

Electronics, toys or games and toiletries/personal care products are at the highest readings in our 13-week table, likely gaining partially from October sales events. In contrast, online clothing, footwear and fashion accessories fell for a fourth consecutive week, reaching their lowest reading in the table and standing 3.2 PPTs below July. This suggests that early holiday online demand particularly for October sales events got directed more toward electronics and giftable categories than fashion.

**Figure 10.**

# Consumer Activities

Consumers appear to be pulling back from higher-cost and more discretionary outings as they approach the holiday season. **Dining** in at restaurants and **meeting friends** or family locally both fell to their lowest readings in the 13-week period. **Enclosed-mall** visits also fell for a fourth consecutive week, returning to their mid-July level, while trips declined by 5.1 PPTs over three months. By contrast, **coffee-shop visits** and **gym/fitness** activity have held up better. The pattern suggests consumers are becoming more selective about discretionary experiences, potentially preserving spending for higher-priority purchases as holiday shopping builds.

**Figure 11.**

# What We Think

### *Where Consumers Are Shopping*

The October 5–11 deal events appear to have had a muted impact on shopper penetration overall. On a four-week rolling average, **Walmart**, **Amazon**, **Target** and **Kohl's** were broadly flat week over week; on a weekly basis, Walmart and Kohl's declined slightly, while Amazon and Target edged higher. Electronics was a clearer bright spot, with in-store penetration up significantly over three months and online penetration also edging up this week, suggesting the category may have benefited from October deal activity.

### *Consumer Sentiment*

Consumer sentiment remains broadly negative, with the clearest divide across income groups. Higher-income consumers have become more optimistic about the economy since September 21, while lower-income consumers have become more pessimistic over the same period, reinforcing the K-shaped consumer environment. This divergence suggests that higher-income households are better positioned to sustain spending, while lower-income consumers remain more vulnerable to economic pressures.

# Methodology

Coresight Research surveys US consumers aged 18+ online each week. Informing the data in this report are our surveys spanning the past 12 months:

- 2026—October 12 (404 respondents), October 5 (401 respondents), September 28 (403 respondents), September 21 (404 respondents), September 14 (401 respondents), September 7 (403 respondents), August 31 (401 respondents), August 24 (404 respondents), August 17 (402 respondents), August 10 (404 respondents), August 3 (401 respondents), July 27 (401 respondents), July 20 (403 respondents), July 13 (403 respondents), July 6 (401 respondents), June 29 (402 respondents), June 22 (402 respondents), June 15 (402 respondents), June 8 (404 respondents), June 1 (402 respondents), May 25 (404 respondents), May 18 (404 respondents), May 11 (401 respondents), May 4 (404 respondents), April 27 (403 respondents), April 20 (401 respondents), April 13 (402 respondents), April 6 (402 respondents), March 30 (403 respondents), March 23 (401 respondents), March 16 (402 respondents), March 9 (400 respondents), March 2 (402 respondents), February 23 (400 respondents), February 16 (402 respondents), February 9 (400 respondents), February 2 (401 respondents), January 26 (402 respondents), January 19 (400 respondents) and January 12 (401 respondents)
- 2025—December 29 (402 respondents), December 22 (401 respondents), December 15 (403 respondents), December 8 (401 respondents), December 1 (404 respondents), November 24 (401 respondents), November 17 (404 respondents), November 10 (401 respondents), November 3 (404 respondents), October 27 (402 respondents), October 20 (401 respondents), October 13 (404 respondents), October 6 (404 respondents), September 29 (405 respondents), September 22 (400 respondents), September 15 (404 respondents) and September 8 (400 respondents).
- The weekly results have a maximum margin of error of ±4.9%, at a 95% confidence level. The four-week rolling average results have a maximum margin of error of ±2.4%, at a 95% confidence level. Visit our methodology page for more information, including on how actual margins of error may be lower than these maximums. PPT changes and % figures may not sum due to rounding.
