Online Grocery Shopper Penetration Hits a New High: The Context for the DoorDash-Instacart Deal

CORESIGHT RESEARCH

Executive Summary

Three Data Points To Watch This Week

1

5.6 PPTs

The rolling-four-week share of consumers buying groceries online rose over three months to the highest reading in our 13-week table.
From 23.9% on August 3, 2026, to 29.5% on October 26, 2026. (Figure 10)

2

6.2 PPTs

The rolling-four-week share of consumers dining at restaurants fell over three months.
From 61.1% on August 3, 2026, to 54.9% on October 26, 2026. (Figure 11)

3

4.4 PPTs

Dollar General's rolling-four-week food shopper penetration rose over three months.
From 18.9% on August 3, 2026, to 23.3% on October 26, 2026. (Figure 6)

What We Think

What Consumers Are Buying

Online grocery is moving from a convenience channel toward a routine part of grocery shopping. The four-week share of consumers buying groceries online reached 29.5% on October 26, its highest reading in our 13-week table and up significantly over three months. This shopper gain is consistent with the broader sales picture: food and beverage e-commerce sales grew 18.5% year over year in the four weeks ended October 4, far ahead of 3.5% total food and beverage sales growth.

This context of strong growth and shopper migration toward rapid delivery is the backdrop for DoorDash's planned acquisition of Instacart.

We see this as a structural shift rather than a short-term trade-off from in-store shopping. Our earlier online grocery research found that growth was being supported by broader shopper participation, higher order frequency and larger baskets, while faster delivery, membership programs and growing consumer comfort with buying perishables online have reduced some of the channel's traditional barriers. The latest shopper data suggest these improvements are translating into wider adoption. Online grocery is increasingly becoming a regular shopping habit, not simply an alternative used when consumers need convenience.

Consumer Sentiment

Consumer sentiment remains weak, although the decline in personal-finance expectations has paused. The four-week reading remains at its lowest level since early June, while the income divide is widening: higher-income consumers are more optimistic about the economy, while middle-income sentiment has weakened to a six-month low. This suggests holiday demand will remain uneven, with higher-income households better positioned to spend while more financially constrained consumers remain focused on value and promotions, consistent with our holiday outlook.

Introduction

We analyze findings from our proprietary weekly surveys of consumers in the US, with the most recent undertaken on October 26, 2026.

We cover our regular questions covering consumer behavior, shopping trends and consumer sentiment.

This report presents charted and tabulated survey findings. We analyze weekly data, monthly data and four-week rolling averages. The four-week rolling averages have a lower margin of error due to the larger sample sizes (see the methodology section at the end of this report).

Consumer Sentiment: The Personal-Finance Slide Pauses

Headline Trends: Personal Finances and the Economy

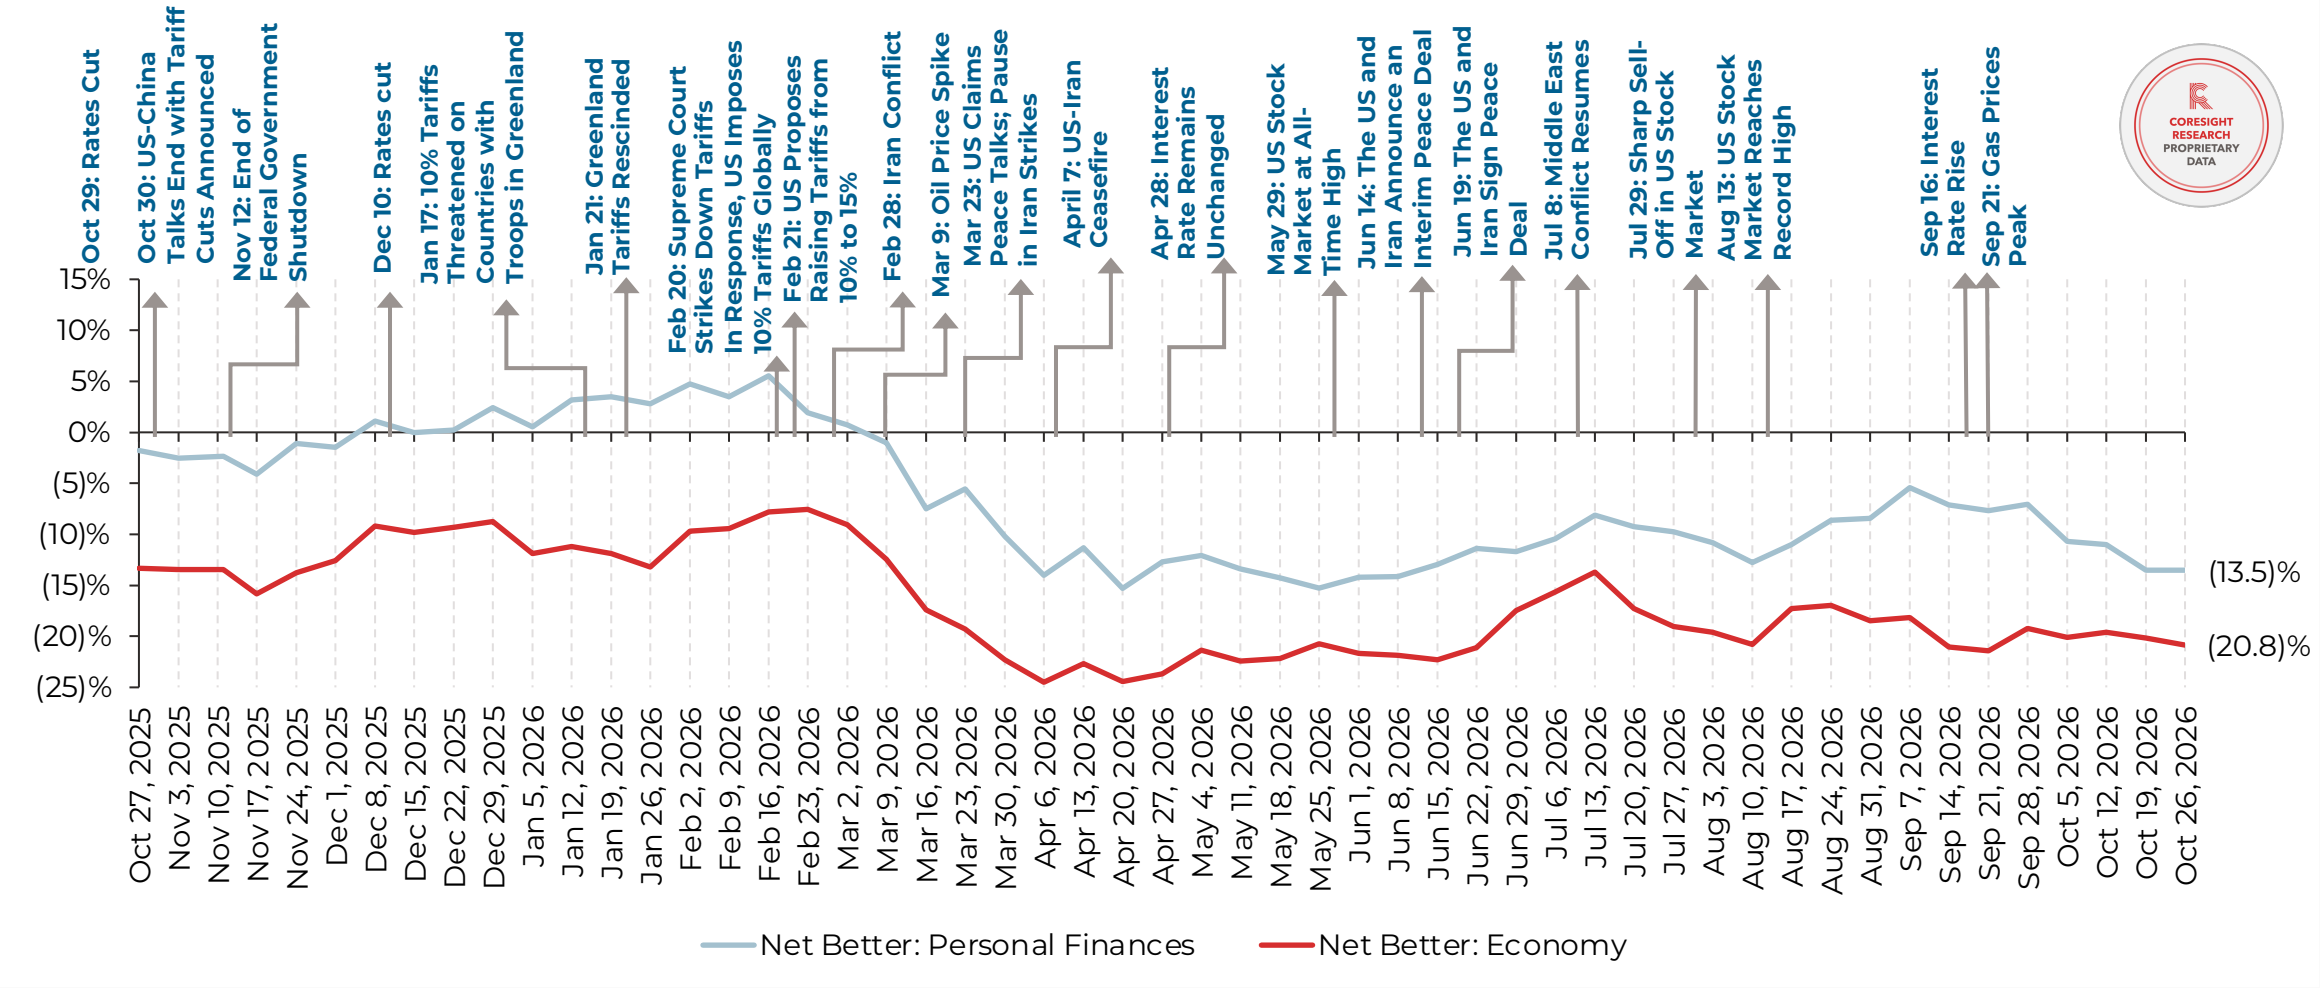

In this section, we analyze headline trends on consumers' expectations for their personal finances and the economy over the next 12 months, based on four-week rolling averages. Our "net-positive" data represent "better" minus "worse." Readers can find further weekly and monthly data on consumer sentiment in the appendix, and additional consumer survey data for each sector in our *US Consumer Survey Insights Databank*.

- Consumers' expectations for their own finances were unchanged this week, while expectations for the economy edged down slightly. Both remain in negative territory.
- Expectations for personal finances stopped falling on the four-week average after declining in five of the past six weeks, but they have not recovered: the reading stays at its lowest since early June.
- Unadjusted weekly data (Figure 4) show positive one-week movements in net financial and economic sentiment.

Personal Finances by Income

The middle-income financial outlook weakened for a fourth consecutive week on the four-week average, to its lowest level since early June.

The lower-income outlook improved slightly, and the higher-income outlook slipped to its lowest level since mid-August but remains the only one in positive territory.

Figure 2.
All Respondents: Whether They Expect Their Household Financial Situation to Get Better or Worse Over the Next 12 Months—Net Better, by Income (% of Respondents, Four-Week Rolling Average)

The Economy by Income

The middle-income economic outlook fell to its weakest reading in six months, while the higher-income expectations rose to its strongest in six months. The lower-income outlook was little changed.

The gap between the higher-income and middle-income expectations is now the widest in six months.

Weekly Trends: Personal Finances and the Economy

In this section, we analyze trends in consumers' expectations for their personal finances and the economy over the next 12 months, based on unadjusted weekly data (versus four-week rolling averages in the previous section).

The weekly reading on personal finances recovered part of last week's fall, which had taken it to its weakest reading since mid-May, as fewer consumers expected their finances to get worse. Weekly readings swing more than four-week averages, so this recovery does not yet mark a turn.

Where Consumers Are Shopping

Value and Convenience Leaders Keep Their Food Gains

The following tables present our further weekly data on shopping and activities undertaken.

Food

Figure 5.
All Respondents: Select Retailers They Have Bought Food Products from in the Past Two Weeks (% of Respondents, Four-Week Rolling Average)

Walmart, **Amazon**, **Dollar General** and **Family Dollar** all hold significant three-month gains in food shoppers on the four-week average, so these four value and convenience retailers have widened their reach since August.

Base: US respondents aged 18+
Source: Coresight Research

The following tables present our further weekly data on shopping and activities undertaken.

Aldi lost food shoppers in the weekly data, and its four-week average fell to its lowest since mid-August; **Kroger** also lost shoppers in the weekly data. **Albertsons/Safeway**'s four-week average is at the lowest reading in our 13-week table. However, none of these moves is statistically significant.

Nonfood

Amazon Gives Back Its October 19 Gain as Walmart Holds

Figure 7.
All Respondents: Select Retailers They Have Bought Nonfood Products from in the Past Two Weeks (% of Respondents, Four-Week Rolling Average)

Base: US respondents aged 18+
Source: Coresight Research

In the weekly data, **Amazon** gave back most of its October 19 gain while **Walmart** held its level. **Amazon**'s four-week average still rose for a second consecutive week, as a weaker September 28 reading left the average. Neither weekly move is statistically significant.

Our data show:

- **Walmart** holds a statistically significant three-month gain on its four-week average, and **Target** gave back its October 19 gain in the weekly data

CORESIGHT RESEARCH Copyright © 2026 Coresight Research. All rights reserved.

Nonfood

Costco and **Temu** both edged up from the 13-week lows their four-week averages reached last week. **Dollar General**'s four-week average eased for a second week. On the other hand, **Dollar Tree** saw significant improvement over three months.

What Consumers Are Buying

In-store purchases of groceries and everyday household products fell back in the weekly data from an unusually strong October 19 reading to late-September levels, and the decline in household products was significant. On the four-week average, toiletries/personal care products reached the highest reading in our 13-week table.

Jewelry or watches, toys or games, electronics, and furniture, furnishings or decorative products all hold significant three-month gains on the four-week average, so discretionary purchases in store have not weakened.

Consumer Activities

Proportion of consumers dining at restaurants fell significantly in the weekly data as well as over the last three months based on four week rolling average data, and visits to open-air shopping centers also fell significantly. On the four-week average, visits to coffee shops, gyms or fitness classes, and leisure or cultural attractions reached the highest readings in our 13-week table.

What We Think

What Consumers Are Buying

Online grocery is moving from a convenience channel toward a routine part of grocery shopping. The four-week share of consumers buying groceries online reached 29.5% on October 26, its highest reading in our 13-week table and up significantly over three months. This shopper gain is consistent with the broader sales picture: food and beverage e-commerce sales grew 18.5% year over year in the four weeks ended October 4, far ahead of 3.5% total food and beverage sales growth.

This context of strong growth and shopper migration toward rapid delivery is the backdrop for DoorDash's planned acquisition of Instacart.

We see this as a structural shift rather than a short-term trade-off from in-store shopping. Our earlier online grocery research found that growth was being supported by broader shopper participation, higher order frequency and larger baskets, while faster delivery, membership programs and growing consumer comfort with buying perishables online have reduced some of the channel's traditional barriers. The latest shopper data suggest these improvements are translating into wider adoption. Online grocery is increasingly becoming a regular shopping habit, not simply an alternative used when consumers need convenience.

We think retailers that pair stores with fast online fulfillment are best placed to gain; if online groceries hold their highs in our November 2 survey, the shift looks lasting.

Furthermore, consumers are cutting outings. Dining at restaurants fell by a significant amount in the weekly data, extending a statistically significant three-month decline on the four-week average. Gasoline at $4.27 a gallon on October 26, more than $1.20 above a year earlier (US Energy Information Administration), raises the cost of outings that consumers can skip.

Consumer Sentiment

Consumer sentiment remains weak, although the decline in personal-finance expectations has paused. The four-week reading remains at its lowest level since early June, while the income divide is widening: higher-income consumers are more optimistic about the economy, while middle-income sentiment has weakened to a six-month low. This suggests holiday demand will remain uneven, with higher-income households better positioned to spend while more financially constrained consumers remain focused on value and promotions, consistent with our holiday outlook.

Methodology

Coresight Research surveys US consumers aged 18+ online each week. Informing the data in this report are our surveys spanning the past 12 months:

- 2026—October 26 (404 respondents), October 19 (400 respondents), October 12 (404 respondents), October 5 (401 respondents), September 28 (403 respondents), September 21 (404 respondents), September 14 (401 respondents), September 7 (403 respondents), August 31 (401 respondents), August 24 (404 respondents), August 17 (402 respondents), August 10 (404 respondents), August 3 (401 respondents), July 27 (401 respondents), July 20 (403 respondents), July 13 (403 respondents), July 6 (401 respondents), June 29 (402 respondents), June 22 (402 respondents), June 15 (402 respondents), June 8 (404 respondents), June 1 (402 respondents), May 25 (404 respondents), May 18 (404 respondents), May 11 (401 respondents), May 4 (404 respondents), April 27 (403 respondents), April 20 (401 respondents), April 13 (402 respondents), April 6 (402 respondents), March 30 (403 respondents), March 23 (401 respondents), March 16 (402 respondents), March 9 (400 respondents), March 2 (402 respondents), February 23 (400 respondents), February 16 (402 respondents), February 9 (400 respondents), February 2 (401 respondents), January 26 (402 respondents), January 19 (400 respondents) and January 12 (401 respondents)
- 2025—December 29 (402 respondents), December 22 (401 respondents), December 15 (403 respondents), December 8 (401 respondents), December 1 (404 respondents), November 24 (401 respondents), November 17 (404 respondents), November 10 (401 respondents), November 3 (404 respondents), October 27 (402 respondents), October 20 (401 respondents), October 13 (404 respondents), October 6 (404 respondents), September 29 (405 respondents) and September 22 (400 respondents).

The weekly results have a maximum margin of error of ±4.9%, at a 95% confidence level. The four-week rolling average results have a maximum margin of error of ±2.4%, at a 95% confidence level. Visit our methodology page for more information, including on how actual margins of error may be lower than these maximums. PPT changes and % figures may not sum due to rounding.
