Walmart Gains Across Food and Nonfood as Kroger's Fightback Begins

CORESIGHT RESEARCH

Executive Summary

Three Data Points To Watch This Week

1 **6.7 PPTs**

Walmart's food shopper penetration rose over three months, from 57.1% on July 27, 2026, to 63.8% on October 19, 2026. (Figure 5)

2 **5.0 PPTs**

Walmart's nonfood shopper penetration increased over three months, from 47.6% on July 27, 2026, to 52.6% on October 19, 2026. (Figure 7)

3 **5.8 PPTs**

Net personal financial sentiment declined over four weeks, from 7.7)% on September 21, 2026, to (13.5)% on October 19, 2026. It has generally drifted down since September 7. (Figure 1)

What We Think

Where Consumers Are Shopping

Walmart continues to stand out as the strongest retailer in our latest data, with food and nonfood shopper penetration both up over the past three months. This aligns with our Holiday 2026 weekly survey, where Walmart led holiday purchases for the third consecutive week and reached 50.4% of recent holiday purchasers, ahead of Amazon at 40.8%. The broader picture suggests Walmart is capturing value-driven demand across both essential and discretionary categories as consumers remain selective.

This week saw Kroger launch its new strategy, focused on customer value, profitable digital growth and operational modernization, with new long-term financial targets through 2029. Kroger plans lower everyday prices and simpler promotions, which should resonate with value-seeking consumers and the longer-term drift toward grocery retailers with an everyday-low-price proposition.

Consumer Sentiment

Consumer sentiment continues to weaken, particularly around personal finances. Net personal financial sentiment has declined significantly over the past four weeks, with expectations weakening across all income groups. Higher-income consumers remain in positive territory, while lower-income consumers remain significantly more pessimistic, reinforcing the K-shaped consumer environment. This divergence suggests higher-income households are better positioned to sustain discretionary spending, while lower-income consumers are likely to remain more cautious.

Introduction

We analyze findings from our proprietary weekly surveys of consumers in the US, with the most recent undertaken on October 19, 2026.

We cover our regular questions covering consumer behavior, shopping trends and consumer sentiment.

This report presents charted and tabulated survey findings. We analyze weekly data, monthly data and four-week rolling averages. The four-week rolling averages have a lower margin of error due to the larger sample sizes (see the methodology section at the end of this report).

Consumer Sentiment: Financial Expectations Weaken Further

Headline Trends: Personal Finances and the Economy

In this section, we analyze headline trends on consumers' expectations for their personal finances and the economy over the next 12 months, based on four-week rolling averages. Our "net-positive" data represent "better" minus "worse." Readers can find further weekly and monthly data on consumer sentiment in the appendix, and additional consumer survey data for each sector in our *US Consumer Survey Insights Databank*.

This week:

- Consumers' expectations for their own finances declined further this week, while expectations for the economy were little changed. Both remain in negative territory.
- Overall, consumer sentiment remained weak as elevated gasoline prices and broader economic concerns continue to weigh on household outlooks.
- Unadjusted weekly data (Figure 4) show negative one-week movements in net financial and economic sentiment.

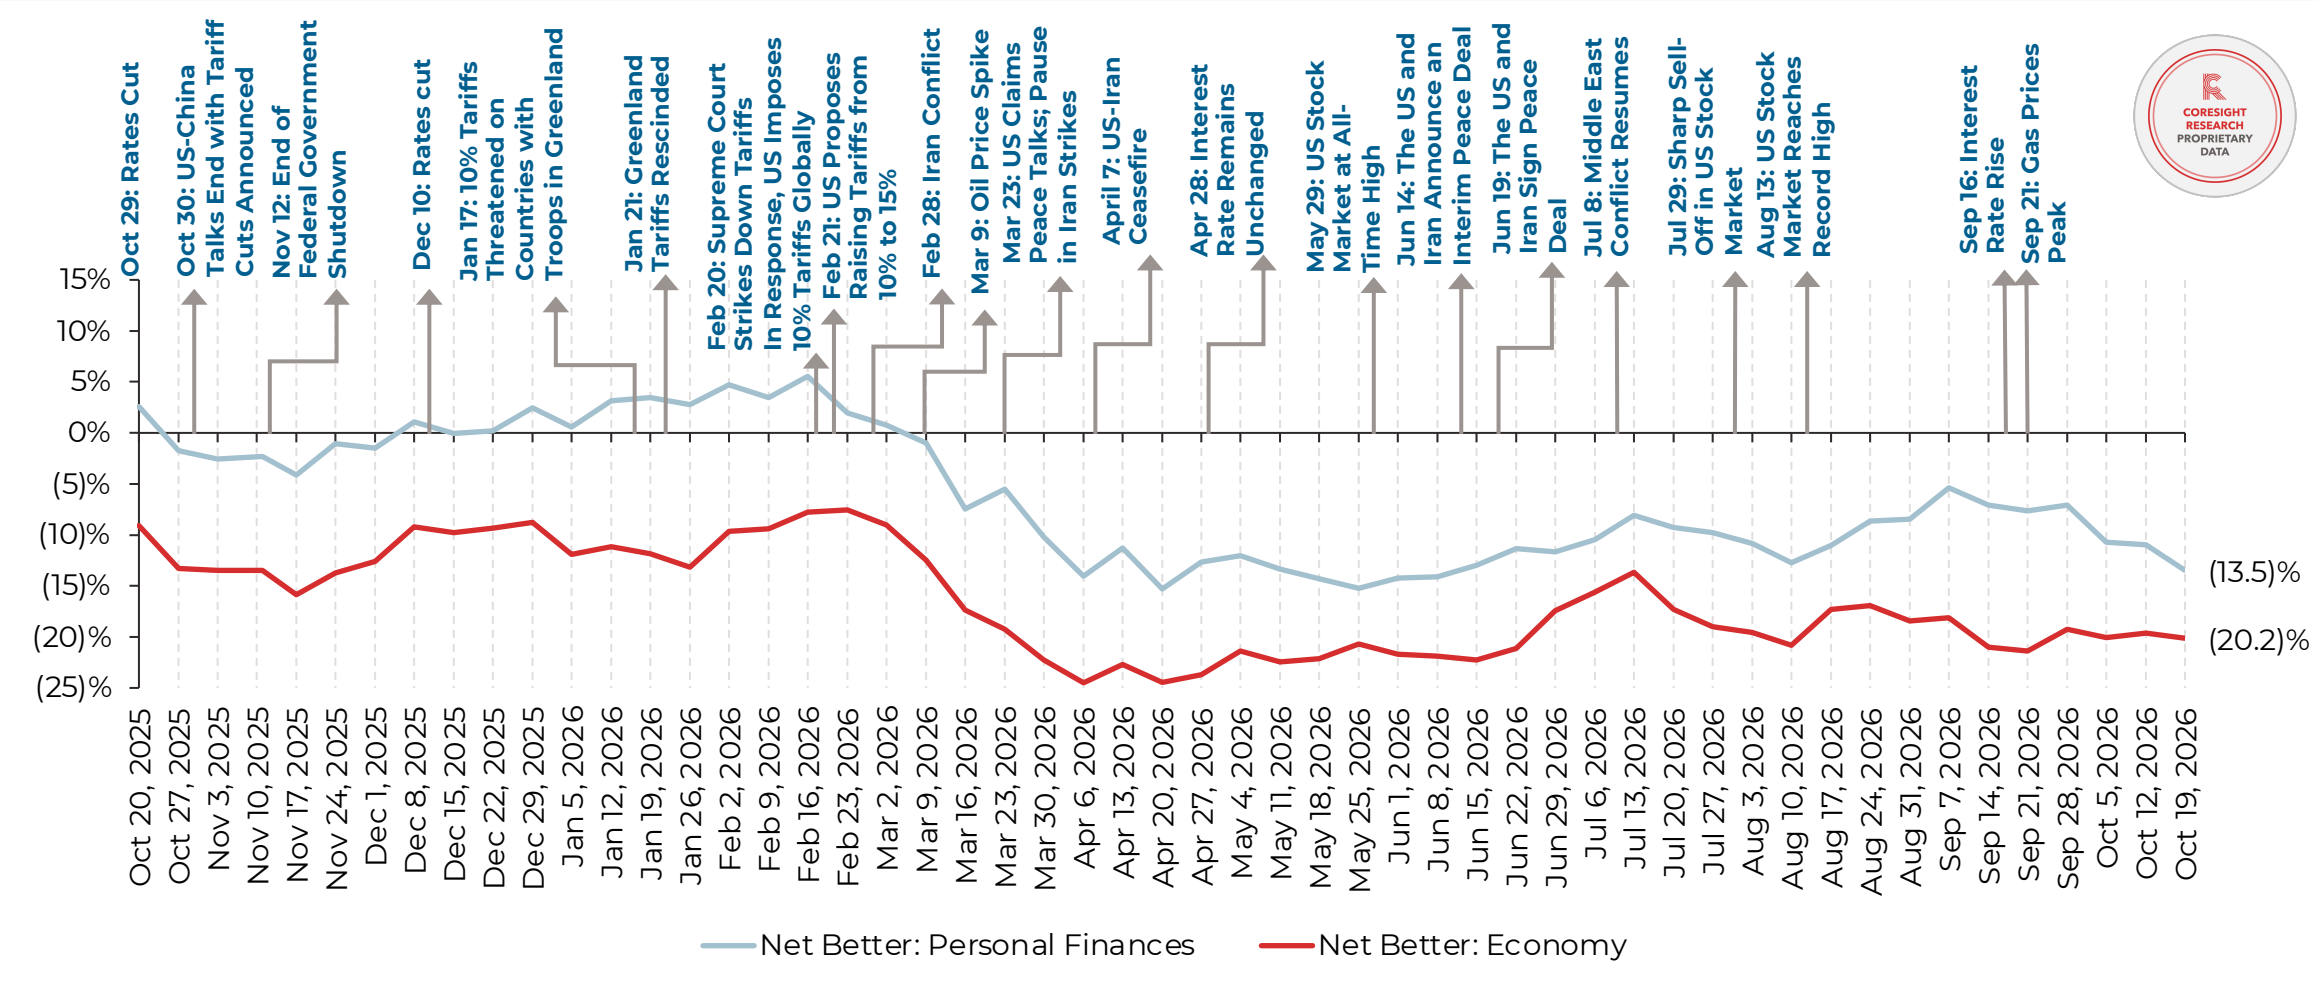

Last week's near-flat reading did not hold, as expectations for personal finances resumed their September-October slide. Neither one-week move is statistically significant, but the personal-finance decline has now run for most of the past six weeks.

Inflection points and gasoline prices: Figure 1 calls out significant events that could impact consumer sentiment. In addition, our analysis shows consumer sentiment generally moving in the opposite direction to gasoline prices: Typically, as gas prices rise, sentiment falls.

Personal Finances by Income

All three income groups' financial outlooks weakened this week. The largest decline was among higher-income households, the one group still in positive territory, and the lower-income group gave back last week's small improvement, reinforcing the likelihood that discretionary spending will remain more resilient among higher-income consumers than among value-constrained households.

Figure 2.

The Economy by Income

The middle-income economic expectations fell to its weakest reading since mid-September, while the lower-income expectations edged up.

Over three months, the higher-income outlook has improved while the other two have weakened. The income divide in economic expectations therefore persists, even as weaker personal-finance expectations reach higher-income households.

Weekly Trends: Personal Finances and the Economy

In this section, we analyze trends in consumers' expectations for their personal finances and the economy over the next 12 months, based on unadjusted weekly data (versus four-week rolling averages in the previous section).

The weekly reading on personal finances gave up last week's partial recovery and fell to its weakest level since mid-May. On the other hand, economic expectations remained almost flat this week.

Figure 4.

Where Consumers Are Shopping

Walmart Regains Food Shoppers as Dollar Stores Ease

The following tables present our further weekly data on shopping and activities undertaken.

Food

Figure 5.
All Respondents: Select Retailers They Have Bought Food Products from in the Past Two Weeks (% of Respondents, Four-Week Rolling Average)

Base: US respondents aged 18+
Source: Coresight Research

Walmart regained food shoppers this week and continues to lead the category's recent gains. Its four-week rolling penetration increased to 63.8%, leaving it **6.7 PPTs** above its July level. **Amazon** and **Dollar General** declined slightly in recent weeks, but remain meaningfully above their July levels.

Copyright © 2026 Coresight Research. All rights reserved.

The following tables present our further weekly data on shopping and activities undertaken.

The two warehouse clubs are moving apart: **Costco**'s four-week average has drifted lower since mid-September, while **Sam's Club** rose to the highest reading in our 13-week table. **Kroger** and **Trader Joe's** gained shoppers in the weekly data after their four-week averages reached 13-week lows last week, and **Albertsons/Safeway** fell to the lowest reading in the table. No one-week move in the food table is statistically significant, so it is too early to determine whether either club's move marks a sustained shift.

Nonfood

Amazon's Four-Week Average Turns Up as Walmart Holds

Figure 7.
All Respondents: Select Retailers They Have Bought Nonfood Products from in the Past Two Weeks (% of Respondents, Four-Week Rolling Average)

Base: US respondents aged 18+
Source: Coresight Research

Amazon's four-week average rose for the first time after three declines, and in the weekly data **Amazon**, **Walmart** and **Target** all gained nonfood shoppers. None of these single-week moves is statistically significant.

Our data show:

- **Dollar Tree**'s four-week average is at its highest since late June, and **Temu**'s is at the lowest in our 13-week table

CORESIGHT RESEARCH Copyright © 2026 Coresight Research. All rights reserved.

Nonfood

Costco's four-week average has fallen for four weeks to the lowest reading in our 13-week table, though its weekly reading turned up from last week's low. **Dollar General** eased while **Dollar Tree** rose, ending the two chains' joint climb.

Overall, the three-month picture continues to favor **Walmart** and value-oriented retailers over **Amazon** and **Target**. Walmart's four-week penetration is up 5.0 PPTs from July, while it is slightly down for Amazon and Target. Dollar stores have also gained over the same period.

What Consumers Are Buying

Groceries and everyday household products recorded the only statistically significant one-week gains, both in the weekly data. Toiletries/personal care products rose to the highest reading in our 13-week table. Part of the rise likely reflects a return from an unusually low reading in our October 12 survey, when most categories fell below their recent averages.

Electronics posted the strongest three-month gain at **4.3 PPTs**. Toys and games also continued to strengthen, consistent with the approach of the holiday season.

Consumer Activities

Outings recovered in the weekly data, and the share of consumers who went on a trip rose significantly. The four-week averages for dining in and meeting up with friends or family locally turned up from 13-week lows but remain below their levels three months ago, so the pullback from outings noted last week has not reversed. Visits to open-air shopping centers rose more than visits to enclosed malls, whose four-week average slipped slightly again.

What We Think

Where Consumers Are Shopping

Ona four week rolling average basis, **Walmart** continues to stand out as the strongest retailer in our latest data, with food and nonfood shopper penetration both up over the past three months. This aligns with our Holiday 2026 weekly survey, where Walmart led holiday purchases for the third consecutive week and reached 50.4% of recent holiday purchasers, ahead of **Amazon** at 40.8%. The broader picture suggests Walmart is capturing value-driven demand across both essential and discretionary categories as consumers remain selective.

This week saw Kroger launch its new strategy, focused on customer value, profitable digital growth and operational modernization, with new long-term financial targets through 2029. Kroger plans lower everyday prices and simpler promotions, which should resonate with value-seeking consumers and the longer-term drift toward grocery retailers with an everyday-low-price proposition.

- See our separate report on Kroger's new strategy and look out for our forthcoming report on grocery discounters in our *Discount Decades* report series.

On a weekly basis, Amazon's weekly nonfood reading has risen in each survey since September 21 and is now at its highest since early September, while Walmart's returned to its pre-event level after dipping in the event week. Last week we found the deal events' effect muted and none of this week's single-week moves is statistically significant. We believe that the deal events added to a climb at Amazon that began in late September, without lasting cost to Walmart. Each week's survey reaches different consumers, so our data cannot show whether the same people shopped at both retailers. Our October 26 survey, whose window falls after the events, will give a first indication: if Amazon holds its gain, the climb looks broader than the events; if it eases back while Walmart holds, an event-driven lift is the likelier reading.

Consumer Sentiment

Consumer sentiment continues to weaken, particularly around personal finances. Net personal financial sentiment has declined significantly over the past four weeks, with expectations weakening across all income groups. Higher-income consumers remain in positive territory, while lower-income consumers remain significantly more pessimistic, reinforcing the K-shaped consumer environment. This divergence suggests higher-income households are better positioned to sustain discretionary spending, while lower-income consumers are likely to remain more cautious.

Methodology

Coresight Research surveys US consumers aged 18+ online each week. Informing the data in this report are our surveys spanning the past 12 months:

- 2026—October 19 (400 respondents), October 12 (404 respondents), October 5 (401 respondents), September 28 (403 respondents), September 21 (404 respondents), September 14 (401 respondents), September 7 (403 respondents), August 31 (401 respondents), August 24 (404 respondents), August 17 (402 respondents), August 10 (404 respondents), August 3 (401 respondents), July 27 (401 respondents), July 20 (403 respondents), July 13 (403 respondents), July 6 (401 respondents), June 29 (402 respondents), June 22 (402 respondents), June 15 (402 respondents), June 8 (404 respondents), June 1 (402 respondents), May 25 (404 respondents), May 18 (404 respondents), May 11 (401 respondents), May 4 (404 respondents), April 27 (403 respondents), April 20 (401 respondents), April 13 (402 respondents), April 6 (402 respondents), March 30 (403 respondents), March 23 (401 respondents), March 16 (402 respondents), March 9 (400 respondents), March 2 (402 respondents), February 23 (400 respondents), February 16 (402 respondents), February 9 (400 respondents), February 2 (401 respondents), January 26 (402 respondents), January 19 (400 respondents), January 12 (401 respondents), January 5 (400 respondents)
- 2025—December 29 (402 respondents), December 22 (401 respondents), December 15 (403 respondents), December 8 (401 respondents), December 1 (404 respondents), November 24 (401 respondents), November 17 (404 respondents), November 10 (401 respondents), November 3 (404 respondents), October 27 (402 respondents), October 20 (401 respondents), October 13 (404 respondents), October 6 (404 respondents), September 29 (405 respondents), September 22 (400 respondents) and September 15 (404 respondents).

The weekly results have a maximum margin of error of ±4.9%, at a 95% confidence level. The four-week rolling average results have a maximum margin of error of ±2.4%, at a 95% confidence level. Visit our methodology page for more information, including on how actual margins of error may be lower than these maximums. PPT changes and % figures may not sum due to rounding.
