US Consumer Survey Insights

Walmart and Amazon Gain Ground in Food Shopping

CORESIGHT RESEARCH

Executive Summary

Three Data Points To Watch This Week

1 **4.8 PPT** **increase in Walmart's food shopper penetration over three months. It increased to 64.1% on September 28, its highest level in three months. (Figure 5)**

2 **5.3 PPT** **increase in Amazon's food shopper penetration over three months. It increased to 24.5% on September 28, recovering steadily after a late-August low. (Figure 5)**

3 **4.7 PPT** **increase in higher-income consumers' ($100K+) financial sentiment week over week. It increased to to 9.3% on September 28. (Figure 2)**

What We Think

Where Consumers Are Shopping

In recent weeks, food shopping has strengthened at scaled, value-oriented retailers. **Walmart** and **Amazon** both reached three-month highs, while **Dollar General** and **Dollar Tree** also improved slightly, reinforcing consumers' preference for value, convenience and broad assortment.

In nonfood, however, the pattern is more differentiated: Walmart rose for a third consecutive week, its highest level in three months, while Amazon slipped slightly. With Prime Big Deal Days scheduled for the following week, some consumers may be delaying purchases in anticipation of promotional pricing; our data show a broadly similar pattern around the June 2026 Prime Day period, when Amazon shopper penetration softened ahead of the event and subsequently strengthened around the promotional window.

Consumer Sentiment

Consumer financial sentiment appears to be stabilizing despite the recent increase in interest rates, but the headline improvement masks a widening divergence by income. Overall household financial expectations remain negative but have held up better than views of the broader economy and have improved over the past three months. At the income level, the divide is more pronounced: higher-income consumers remain the only group with positive net financial sentiment, while lower-income consumers remain deeply negative and have become more pessimistic over the past month. This reinforces the "K-shaped" consumer economy model.

Introduction

We analyze findings from our proprietary weekly surveys of consumers in the US, with the most recent undertaken on September 28, 2026.

We cover our regular questions covering consumer behavior, shopping trends and consumer sentiment.

This report presents charted and tabulated survey findings. We analyze weekly data, monthly data and four-week rolling averages. The four-week rolling averages have a lower margin of error due to the larger sample sizes (see the methodology section at the end of this report).

Consumer Sentiment: Financial Sentiment Is Stabilizing

Headline Trends: Personal Finances and the Economy

In this section, we analyze headline trends on consumers' expectations for their personal finances and the economy over the next 12 months, based on four-week rolling averages. Our "net-positive" data represent "better" minus "worse." Readers can find further weekly and monthly data on consumer sentiment in the appendix and additional consumer survey for each sector can be find here *US consumer survey insights databank*.

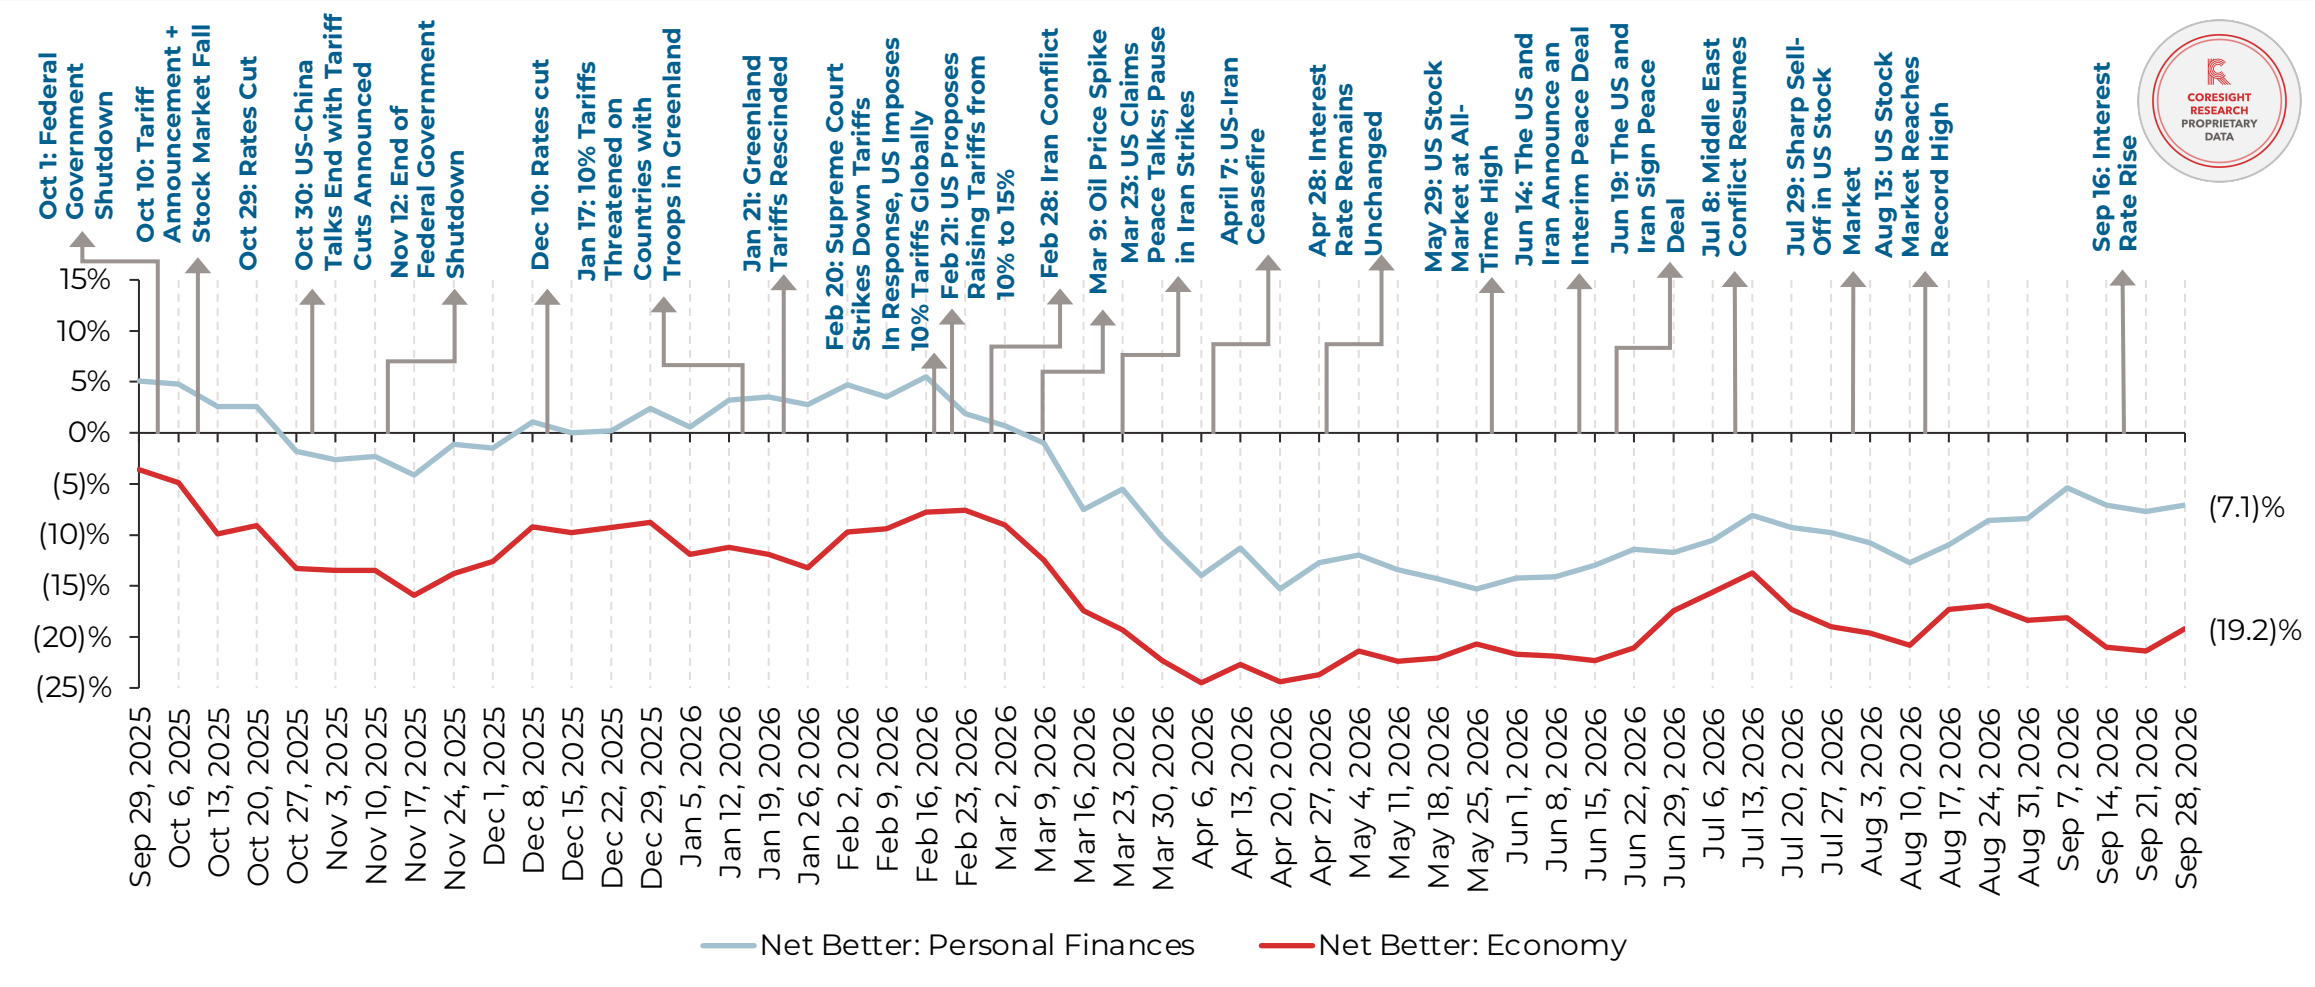

- Consumers' expectations for their own finances remained almost flat this week, while their expectations for the economy edged up, but both remain in negative territory.
- Unadjusted weekly data (Figure 4) show mix one-week movements in net financial and economic sentiment.

Overall, consumer sentiment remains pressured, but the important nuance is that household financial expectations appear to be stabilizing. Both household financial and broader economic expectations are negative territory, however, household financial expectations have held up better and have improved over the past three months and is moving towards stabilization.

Personal Finances by Income

Higher-income households are the group that our "K-shaped" economic framing identifies as carrying discretionary spending growth, and their confidence advantage again improved this week, after two consecutive weeks of decline. Higher-income consumers are key drivers of discretionary spending, so their renewed improvement may support selective demand even as lower-income households remain under pressure.

Lower-income households continue to report negative expectations and their financial sentiment is down **6.9 PPTs** month over month, reflecting greater sensitivity to cost pressures.

The Economy by Income

Based on four-week rolling averages:, economic expectations remain negative across all income groups, but the recent movement has differed by segment. Lower-income households recorded the weakest reading, while higher- and middle-income consumers showed modest improvement and moved in the same direction. Despite some short-term movement, confidence remains broadly constrained by concerns about the economic outlook.

Weekly Trends: Personal Finances and the Economy

In this section, we analyze trends in consumers' expectations for their personal finances and the economy over the next 12 months, based on unadjusted weekly data (versus four-week rolling averages in the previous section).

Weekly measures moved in the opposite direction from each other this week. Economic sentiment improved slightly this week, while personal-finance sentiment declined slightly, leaving the two metrics closer together. The convergence suggests that consumers' household and macro expectations may be becoming more aligned, but both remain negative, so the broader message is still caution.

Where Consumers Are Shopping

Walmart and Amazon Shopper Penetration Reaches Three-Month Highs

The following figures present our weekly data on shopping and activities undertaken.

Food

Figure 5.
All Respondents: Select Retailers They Have Bought Food Products from in the Past Two Weeks (% of Respondents, Four-Week Rolling Average)

Base: US respondents aged 18+
Source: Coresight Research

Food shopping is increasingly consolidating around scaled, value-oriented destination. **Walmart** remains the dominant food destination and reached a three-month high, with a significant increase since July 6. **Amazon** posted the largest three-month gain of any retailer covered, at **5.3 PPTs**.

Dollar stores have also regained momentum, reaching their strongest levels in the past two to three months. **Dollar Tree** and **Dollar General** are now at their highest shopper-penetration levels since July 20 and July 6, respectively.

CORESIGHT RESEARCH Copyright © 2026 Coresight Research. All rights reserved.

The food table adds depth to the consolidation story. This week, **Walmart** led at 64.1%, with a **4.8 PPT** gain over three months, while **Amazon** rose to 24.5%, up 5.3 PPTs over three months. **Dollar General and Dollar Tree** also witnessed an upward trend in recent weeks. The data imply that food shoppers are rewarding scale, trip efficiency and perceived value.

Nonfood

Gap Between Walmart and Amazon Widens as Walmart Gains and Amazon Pulls Back

Figure 7.
All Respondents: Select Retailers They Have Bought Nonfood Products from in the Past Two Weeks (% of Respondents, Four-Week Rolling Average)

Base: US respondents aged 18+
Source: Coresight Research

Walmart and **Amazon** remain the central competitive story. Walmart gained for a third consecutive week and reached its highest level in three months, while Amazon slipped slightly, widening the gap between the two.

Amazon's slight decline may reflect consumers delaying purchases ahead of the upcoming Prime Big Deal Days, potentially creating a temporary pause in shopper penetration as deal-seeking customers wait for the promotional event.

Our data suggest:

- ***Amazon**'s three-month gain is the largest of any nonfood retailer here, and the only one of that magnitude*
- ***Walmart** remains below its late-June level despite the recent recovery*

Copyright © 2026 Coresight Research. All rights reserved.

Nonfood

Nonfood shopping showed a broad-based improvement (although not statistically significant) this week across several value-oriented retailers. **Walmart** increased slightly to 52.2% and reached a three-month high, while **Dollar General**, **Dollar Tree** and **Family Dollar** each posted slight gains, suggesting some renewed engagement with value formats. Amazon, by contrast, declined slightly, partially reversing its recent recovery.

What Consumers Are Buying

In-store shopping activity remains concentrated around essential categories, with food, household products and personal care leading. The health category declined slightly this week, ending its four weeks of upward momentum. Recent gains have been more selective, with **beauty, sports products** and **jewelry** showing continued upward momentum. Early holiday-related categories, including **toys**, are also showing improvement.

Consumer Activities

Consumer activities remain mixed, with retail and leisure engagement holding relatively steady despite some weekly volatility. Mall visits have improved over the past three months, while social and dining activities have softened recently. Overall, consumers remain selective in discretionary activities amid a cautious spending environment.

What We Think

Where Consumers Are Shopping

In recent weeks, food shopping is strengthening at scaled, value-oriented retailers. **Walmart** and **Amazon** both reached three-month highs, while **Dollar General** and **Dollar Tree** also improved slightly, reinforcing consumers' preference for value, convenience and broad assortment.

In nonfood, however, the pattern is more differentiated: Walmart rose for a third consecutive week, its highest level in three months, while Amazon slipped slightly. With Prime Big Deal Days scheduled for the following week, some consumers may be delaying purchases in anticipation of promotional pricing; our data shows a broadly similar pattern around the June 2026 Prime Day period, when Amazon shopper penetration softened ahead of the event and subsequently strengthened around the promotional window.

Consumer Sentiment

Consumer financial sentiment appears to be stabilizing despite the recent increase in interest rates, but the headline improvement masks a widening divergence by income. Overall household financial expectations remain negative but have held up better than views of the broader economy and have improved over the past three months. At the income level, the divide is more pronounced: higher-income consumers remain the only group with positive net financial sentiment, while lower-income consumers remain deeply negative and have become more pessimistic over the past month. This reinforces the K-shaped consumer economy.

Methodology

Coresight Research surveys US consumers aged 18+ online each week. Informing the data in this report are our surveys spanning the past 12 months:

- 2026—September 28 (403 respondents), September 21 (404 respondents), September 14 (401 respondents), September 7 (403 respondents), August 31 (401 respondents), August 24 (404 respondents), August 17 (402 respondents), August 10 (404 respondents), August 3 (401 respondents), July 27 (401 respondents), July 20 (403 respondents), July 13 (403 respondents), July 6 (401 respondents), June 29 (402 respondents), June 22 (402 respondents), June 15 (402 respondents), June 8 (404 respondents), June 1 (402 respondents), May 25 (404 respondents), May 18 (404 respondents), May 11 (401 respondents), May 4 (404 respondents), April 27 (403 respondents), April 20 (401 respondents), April 13 (402 respondents), April 6 (402 respondents), March 30 (403 respondents), March 23 (401 respondents), March 16 (402 respondents), March 9 (400 respondents), March 2 (402 respondents), February 23 (400 respondents), February 16 (402 respondents), February 9 (400 respondents), February 2 (401 respondents), January 26 (402 respondents), January 19 (400 respondents) and January 12 (401 respondents)
- 2025—December 29 (402 respondents), December 22 (401 respondents), December 15 (403 respondents), December 8 (401 respondents), December 1 (404 respondents), November 24 (401 respondents), November 17 (404 respondents), November 10 (401 respondents), November 3 (404 respondents), October 27 (402 respondents), October 20 (401 respondents), October 13 (404 respondents), October 6 (404 respondents), September 29 (405 respondents), September 22 (400 respondents), September 15 (404 respondents), September 8 (400 respondents), September 1 (404 respondents) and August 25 (401 respondents).
- The weekly results have a maximum margin of error of ±4.9%, at a 95% confidence level. The four-week rolling average results have a maximum margin of error of ±2.4%, at a 95% confidence level. Visit our methodology page for more information, including on how actual margins of error may be lower than these maximums. PPT changes and % figures may not sum due to rounding.
